Résumé du projet en français (Non Confidentiel – 4000 caractères maximum, espaces incluses) - Le même résumé peut être utilisé (copier-coller) sur le site de dépôt.

La crise démocratique multifactorielle (montée de l'abstention, défiance à l'égard du personnel politique, polarisation des sociétés, désordres informationnels...) confronte nos sociétés au défi de la (re)construction du commun face à des espaces publics fragmentés. Pour y répondre, DemoCIS engage un collectif interdisciplinaire d'excellence issu de **4 Universités** (Lille, CY Cergy Paris Université, Jean Moulin Lyon 3, Grenoble Alpes), **3 IEP** (Lille, Grenoble, Saint-Germain-en-Laye), de **l'Institut Mines Télécom**, du **CNRS** et d'**Inria**. **336 chercheurs et enseignants-chercheurs** issus de **51 unités de recherche** dont **16 UMR CNRS** et **1 Unité Propre CNRS** de disciplines SHS variées (Science politique, Sociologie, Droit, Histoire, Histoire du droit, Economie, Science de l'éducation, Géographie, Linguistique, Philologie, Philosophie, Littérature, Science de Gestion, Sciences de l'information et de la communication) sont mobilisés pour apporter des réponses à **4 défis majeurs** : 1/ Répondre à la crise des institutions par l'innovation démocratique : prise de décision, délibération et évolution des espaces publics institutionnels, 2/ Repenser les lieux et formes d'expression de la citoyenneté : citoyenneté ordinaire et nouveaux espaces de la démocratie, 3/ Agir contre la polarisation des sociétés et les désordres informationnels : information et transmissions des savoirs, 4/ Renforcer les démocraties menacées : conflits et insécurités démocratiques au prisme de l'Etat de droit.

Fort de son ancrage territorial et du large réseau national et international, académique et non-académique, qu'il mobilise, le consortium entend i) contribuer à la **refondation de la citoyenneté et des démocraties** en s'appuyant sur une **recherche participative** et le déploiement d'une **Convention citoyenne pour la démocratie** ii) **produire des outils pérennes** notamment un Baromètre de la démocratie axé sur les opinions et les aspirations démocratiques des citoyens ainsi qu'une plateforme dédiée à l'analyse et au suivi des risques informationnels, iii) **installer un réseau académique national et international de premier plan** sous la coordination du CNRS sur la démocratie délibérative et la confiance citoyenne.

Pour valoriser les résultats de la recherche, appuyer les politiques publiques et renforcer le lien science-société, nous créerons la **plateforme vivante pour la démocratie DemoCIS** permettant l'accès aux résultats de la recherche, aux experts du consortium par un dispositif d'interpellation citoyenne, ainsi qu'à des contenus et outils pédagogiques de formation à la citoyenneté. Nous développerons un **programme chercheur-expert**, construirons des **programmes de formation continue « sur mesure »** à l'attention des acteurs publics, déploierons des **actions de formation et de médiation grand public** en prenant appui sur les labels « Science avec et pour la société » de nos établissements.

DemoCIS est au cœur des priorités scientifiques du consortium, et de l'Université de Lille en particulier, qui fait du soutien aux SHS, inscrit dans son COMP, un point central de sa stratégie scientifique. La thématique de l'Evolution des Démocraties, notamment développée au sein d'un Cluster dédié du **Hub Cultures, sociétés et pratiques en mutation (I-SITE Lille)** créé en 2020, occupe déjà une place majeure dans sa production scientifique en SHS (10% sur la période 2019-2024) que DemoCIS a vocation à amplifier. DemoCIS prendra appui sur des dispositifs nationaux, notamment le GIS Démocratie et Participation au sein duquel les partenaires jouent d'ores et déjà un rôle leader, ainsi que sur les synergies déjà existantes entre membres du consortium et les nombreuses parties prenantes nationales et internationales réunies autour du projet, pour installer une communauté scientifique interdisciplinaire d'excellence sur l'Evolution des Démocraties.

Résumé du projet en anglais (Non Confidentiel – 4000 caractères maximum, espaces incluses) - Le même résumé peut être utilisé (copier-coller) sur le site de dépôt.

The multifactorial democratic crisis (rising abstention rates, mistrust of politicians, polarization of societies, informational disorder, etc.) confronts our societies with the challenge of (re)constructing the commons in the context of fragmented public spaces. To meet this challenge, DemoCIS has brought together an interdisciplinary group of excellence from **4 universities** (Lille, CY Cergy Paris Université, Jean Moulin Lyon 3, Grenoble Alpes), **3 IEP** (Lille, Grenoble, Saint-Germain-en-Laye), **Institut Mines Télécom, CNRS and Inria**. DemoCIS involves a total of **336 researchers and teacher-researchers** from **51 research units**, including **16 CNRS UMRs and 1 CNRS Unit**, and a wide range of HSS disciplines (Political Science, Sociology, Law, History, History of Law, Economics, Educational Science, Geography, Linguistics, Philology, Philosophy, Literature, Management Science, Information and Communications Science) are mobilized to provide responses to **4 major challenges**: 1/ Responding to the institutional crisis through democratic innovation: decision making, deliberation and the evolution of institutional public spaces; 2/ Rethinking the places and forms of expression of citizenship: everyday citizenship and new spaces of democracy; 3/ Acting against the polarization of societies and informational disorder: information and the transmission of knowledge; 4/ Strengthening threatened democracies: democratic conflicts and insecurities through the prism of the rule of law.

Drawing on local roots and an extensive national and international academic and non-academic network, the consortium intends to i) contribute to the **rebuilding of citizenship and democracies through participatory research** and the deployment of a **Citizens' Convention for Democracy**; ii) **produce sustainable tools**, notably a Democracy Barometer focusing on citizens' opinions and democratic aspirations, and a platform dedicated to analyzing and monitoring informational risks; iii) **set up a leading national and international academic network** on deliberative democracy and citizen trust, coordinated by the CNRS.

To enhance the value of the research results, support public policy and strengthen the science-society link, we will create a **living platform for DemoCIS democracy**, providing access to research results, to the consortium's experts via a citizen query system and to educational content and tools for citizenship training. We will develop a **researcher-expert program**, build **tailor-made continuing education programs** for public-sector players, and roll out **training and mediation initiatives for the general public**, drawing on our establishments' "Science with and for society" labels.

DemoCIS is at the heart of the scientific priorities of the consortium, and of the University of Lille in particular, which has made support for the social sciences and humanities a central part of its scientific strategy. The "Democracies in Evolution" theme, notably developed within a dedicated Cluster of the **Changing Cultures, Societies and Practices Hub (I-SITE Lille)** created in 2020, already occupies a major place in ULille's scientific production in HSS (10% during the 2019-2024 period), which DemoCIS aims to amplify. DemoCIS will draw on national mechanisms, in particular the GIS Démocratie et Participation in which the partners already play a leading role, as well as existing synergies between consortium members and the many national and international stakeholders brought together for the project, to establish an interdisciplinary scientific community of excellence on the Evolution of Democracies.

1. Ambition

1.1. Theme, scientific challenges, societal ambitions

Democracies are weakened by multiple threats (polarization of societies, fake news, cyber-attacks, political violence...), to the point that some fear they may disappear. Growing disaffection with representative processes could turn citizens away from the desire to live in a democracy. In the face of the decisive issues raised by this democratic crisis, the Human and Social Sciences (HSS) have so far offered contradictory results, which suffer from disciplinary and epistemological fragmentation. DemoCIS, by bringing together a diverse and complementary consortium, mobilizing a broad disciplinary spectrum, will not only seek to better describe the democratic crisis, but, above all, it will aim to inform public policies and civil society with co-produced knowledge. **Drawing on our unique expertise in participatory research and on the substantial knowledge that will be produced, our ambition is to work with institutions, citizens and civil society to experiment with alternative democratic practices, within institutional and non-institutionalized spaces, which can feed into public policy actions and reassert citizens' place.** More specifically, DemoCIS has four key objectives:

- 1. Contribute to the rebuilding of citizenship and democracies through participatory research and the implementation of a Citizens' Convention for Democracy**, developed in collaboration with stakeholders from civil society and partners with methodological expertise in this field (Stanford University, Université Grenoble Alpes, Université de Nantes). Its purpose is to capture people's democratic aspirations and nourish proposals for institutional reform based on citizens' deliberations.
- 2. Develop sustainable tools** for the academic community, decision-makers, and society:
 - A **Democracy Barometer** focusing on opinions and democratic aspirations and an **International Observatory of Democratic Practices**, focusing on past and present experiments. Both will feed into the first stages of the creation of an **Institut Universitaire d'Analyse de l'Opinion Publique (IUAOP)**, **focusing on Deliberative Democracy and Citizen Trust**, which could be enacted in the GIS Démocratie et participation. DemoCIS's ambition is to provide France with a public academic institute that will produce itself its data, stemming from public research, independent of private polling institutes, such as ANES (American National Election Studies).
 - A **platform dedicated to observing, analyzing and monitoring systemic risks in the French information landscape**, and assessing their impact on public opinion.
 - Experimentation in certain areas (Lille, Grenoble, Lyon, Ile-de-France, etc.) with **democratic mediation mechanisms** to regulate and manage local conflicts, involving the Commission nationale du débat public (National Commission for Public Debate).
- 3. Construct a first-rate national and international academic network, mobilizing and bringing together, in addition to the DemoCIS partners, the numerous national and international stakeholders.** This dynamic will enable our consortium to apply to international research projects, and the program includes actions and resources to encourage the submission of European projects.
- 4. Create training materials and tools for the public** (such as the Fresque de la désinformation) to enhance citizens' capacity to engage in democratic processes and encourage citizen participation and develop **training resources for elected representatives and decision-makers.**

1.2. Lead institution, consortium, stakeholders

The University of Lille. The University of Lille is the DemoCIS project leader. Awarded with the I-SITE label of excellence in 2017, it comprises 11 faculties and institutes (including 7 in the Human

(VERSION DU 10/07/2024)**

DemoCIS

and Social Sciences (HSS)) and 4 member schools (including Science Po Lille and the Ecole supérieure de journalisme de Lille) and is one of the largest universities in the French-speaking world, with almost 80,000 students (including 10,000 international students), 64 research units and 3,300 teacher-researchers and researchers. The University of Lille has made support for the HSS a central part of its scientific strategy. Relying on 20 HSS units, including 8 CNRS UMRs, the creation of the *Hub Cultures, sociétés et pratiques en mutation (Changing cultures, societies and practices)* in 2020 was strongly supported by the I-SITE and has made it possible to initiate and structure interdisciplinary research dynamics on democracies via a dedicated cluster. Furthermore, the goal of "making the HSS an element of the University of Lille's transversal identity" is enshrined in its Contract of Objectives, Means and Performance (COMP). **The theme of the Evolution of Democracies already occupies a significant place in the institution's HSS scientific output** (777 publications over the 2019-2024 period, i.e. 10% of the institution's HSS output). The University of Lille **has committed 159 teacher-researchers to DemoCIS, 64 of whom will be spending more than 50% of their research time on the project.** DemoCIS will mobilize the expertise developed thanks to **6 fundamental chairs at the Institut Universitaire de France (IUF)** on democratic issues, a **Jean Monnet Chair** in European Law on state, citizen and regional implications in the European Union, and a **Parliamentary Studies Chair**, created as part of the University of Lille's support for sustainable development goals, including Goal 16 - Peace, justice and effective institutions. Part of this dynamic includes a **cross-disciplinary project** supported by the I-SITE Excellence Initiative, involving 46 researchers and teacher-researchers (economists, political scientists, psychologists, lawyers, historians and computer scientists) on "Decision-making under radical uncertainty". The University of Lille is a **leader in the field of participatory research**, as demonstrated by its leadership of the GIS Démocratie et Participation, its involvement at the heart of the collaborative project "Croiser les Savoirs avec tou.te.s" with ATD Quart Monde, and its participation in the French component of the International Social Survey Program (ISSP). It is also a lead of the Observatoire Linguistique du Discours Numérique (awarded the Initiative d'Intérêt Culturel et Scientifique label) and has developed internationally recognized expertise in the study of cybersecurity, breaches of the rule of law and associative freedoms through the research units CERAPS, CRDP and Clersé. The DemoCIS project is designed to amplify this trajectory.

The consortium. The University of Lille is the leader of the DemoCIS project, which brings together the Université Jean Moulin Lyon 3, the Université Grenoble Alpes, CY Cergy Paris Université, IEP Grenoble, IEP Saint-Germain-en-Laye, Institut Mines Télécom, CNRS and Inria. DemoCIS represents a consortium of **336** teacher-researchers and researchers, of which **105** will be dedicating over 50% of their research time to the project. They belong to **51 research units**, including **16 CNRS UMRs** (CERAPS - CHJ - CLERSE - HALMA - IRHIS - LEM - STL - IRHIM - LARHA - TRIANGLE - CESDIP - THEMA - IRISA - LAB-STIC - LPNC - PACTE) and **1 CNRS Unit**. The members of the consortium bring a diverse range of expertise from various Human and Social Sciences disciplines, including **Political Science, Law, History of Law, Education Science, Sociology, Geography, History, Economics, Linguistics, Philology, Philosophy, Literature, Management, Information and Communication Sciences**. Their production represents more than **1950 publications since 2019** on the DemoCIS theme. Together, they are involved in **22 ANR projects, 6 European projects in the field and 9 fundamental chairs at the Institut Universitaire de France**. The members of the consortium participate in a number of important scientific interest groups and networks (GIS Eurolab, GIS Marsouin, Groupement européen de recherche sur les normativités, the European Association of Research and Technology Organisations, the European Digital Media Observatory, the Media Pluralism Monitor, etc.) and play key roles in national and international bodies (World Electoral

(VERSION DU 10/07/2024)**

DemoCIS

Justice Network, Association française de Droit Constitutionnel, Assises de la francophonie scientifique on disinformation and its link with scientific diplomacy, etc.).

The partners. The **CNRS**, as host of the Humanum and Progedo infrastructures, will provide major support in the management and valorization of the project's data and research. A variety of CNRS components, including CNRS international networks, CNRS research units abroad (Maison Française d'Oxford, Centre Marc Bloch, Centre français de recherche en sciences sociales de Prague, etc.), thematic networks (e.g. RT Internet IA et société), GISs (GIS Démocratie et participation, GIS Euro-Lab.), International Research Networks (IRN *Les défis d'une participation accrue des citoyens au fonctionnement des institutions : entre développement d'une culture participative et démocratisation des démocraties*, IRN *Démocratie et libertés à l'ère numérique : vers la e-démocratie de droit (e-delib)*), will be major support points for the establishment of an unprecedented international research network to support DemoCIS. **Inria**, co-leader of the **eNSEMBLE PEPR**, will bring to the project its expertise in digital collaboration and digital uses, as well as in the development of digital tools. It will collaborate on the processing of the *Citizens' Convention for Democracy* through topic modelling (such as that developed as part of the automatic analysis of open consultations during the *Grand Débat National*) and will accompany the project on the data visualization of quantitative and qualitative data from the Democracy Barometer. **The University of Lyon 3** has 2 Chairs at the Institut Universitaire de France in the field. It is also a member of the Labex Comod (Constitution de la Modernité: Raison, Religion, Politique, axis 3 "L'Etat et les citoyens") and is home to the Jean Monnet ProValUE Chair for "promoting and preserving the values of the European Union". Université Lyon 3, which hosts the Franco-Quebec Chair in Freedom of Expression, is today the leading institution for the study of threats to freedom of expression, at the crossroads of philosophy, law and history. **Université Grenoble Alpes** has expertise in high-profile longitudinal systems, such as the *Observatoire des non-recours aux droits et aux services* (Odenore), for the analysis and improvement of public policies, and in data and analytical tools to improve understanding of exposure to information on social networks. Through its UNESCO Chair in International Communication, this partner engages in scientific and educational activities focused on building inclusive societies and promoting freedom of expression while combating discrimination and hate speech. **Sciences Po Grenoble** has one fundamental Chair at the Institut Universitaire de France. Together with UGA, is involved in several international surveys (*European Values Study*, *International Social Survey Program*) and French election studies (FES) in collaboration with PROGEDO IR*s. Through the research lab PACTE, they also have teams studying transformations in justice, the relations between police and populations, as well as on cyber issues, with Cyberalps (Grenoble Cybersecurity Institute), and the MIAI Chair (and its Legal and regulatory implications of artificial intelligence chair). **CY Cergy Paris Université** and **Sciences Po Saint-Germain-en-Laye** have recognized expertise in political violence and (de)radicalization and radical right-wing groups (Junior Chair HSS 2023 "Opposition strategies to European illiberal forces, on the analysis of public policies developed in response to these threats, on penal institutions and relations between police and society"). The Cesdip research unit at CYU leads the *Groupe européen de recherches sur les normativités* (GERN) and has built a long-term partnership with the *Centre International de Criminologie Comparée* at the Université de Montréal. **Institut Mines Télécom** is currently engaged in an ANR project and two European projects, including ENFIELD and MeDeMap, directly linked to the DemoCIS program. These projects along with the creation and Chair of the *Good in Tech* research network and participation in the *Advisory board of Princeton University accelerator to study information environment*, as well as collaboration with EDMO and MPM networks, provide essential data, analysis grids and a rich network of collaborators. Several IMT teacher-researchers

involved in DemoCIS are also members of the "Data Analytics and AI" and "Digital Sovereignty" thematic communities, which bring together over 200 teachers-researchers and researchers in data science and the social sciences.

Our consortium will involve **stakeholders** in its structuring actions:

- **Academic stakeholders:** the GIS Participation and Democracy, the European Alliance Eutopia, the Universities of Nantes, Avignon, Limoges and Paris 8, which can provide the project with targeted expertise, in particular in information and communications sciences, citizen mobilization and conflict management. International members of the consortium include the Universities of Amsterdam, Bonn, Montreal, Stanford, Princeton, University of Oregon, Johns Hopkins University, the Gruppo di Intervento e studio nel Campo dell'Educazione Linguistica. They will provide the consortium with the best research expertise and practices and will feed a comparative approach to the phenomena studied. Others include the *Maisons des Sciences de l'Homme* at partner sites and the MSH in Brussels and Liège, which will participate in the dissemination of research results.
- **Non-academic stakeholders** will play a full part in DemoCIS research work and will be involved in the construction of case studies, in the participative work of the four DemoCIS scientific Workpackages and will also participate in conducting experimental work:
 - o **Institutions and local authorities:** Conseil Economique, Social et Environnemental, Institut des Etudes et de la recherche sur le Droit et Justice, Défenseur des droits, Arcom, alongside local institutions, (regional councils, metropolitan institutions, town halls such as Métropole de Lille, Ville de Lille, Région Hauts de France, Métropole de Lyon) and education authorities (Rectorats);
 - o **Observatories and associations** working on democratic issues, including the Fédération des Centres Sociaux de France (FCSF), Observatoire de l'éthique publique, Mouvement associatif and Association Parlons démocratie, Mouvement ATD Quart Monde, Institut de la Concertation et de la Participation Citoyenne ICPC, Ligue des droits de l'homme, Amnesty International;
 - o **Companies**, such as the start-up Be my media and press and media companies.

1.3. Outstanding publications and previous initiatives, legitimacy of the consortium

The DemoCIS consortium can boast of a significant publication dynamic with high international visibility, including a presence in the best journals in the disciplines involved and reference books (for a full selection and detailed presentation of these productions, please refer to Appendix Outstanding publications and previous initiatives).

1. Gourgues G., Mazeaud A., Nez H., Sainty J., Talpin J., « Les Français veulent-ils plus de démocratie ? Analyse qualitative du rapport des citoyens à la politique », *Sociologie*, 2021, 12 (1), p.1-19) (Université de Lille et d'Avignon)

2. Scientific component

2.1. State of the art and benchmark

Recent research findings. Democratic institutions have been seeking to innovate in response to the crisis of representative government, with varying degrees of success. Research has shown that the real and perceived gaps between elites and citizens are widening, as evidenced by the crisis in political vocations, the rise in abstention, electoral volatility (Blais, Daust, 2020) and a feeling of distrust towards decision-makers. Finally, the belief in the illegitimacy or ineffectiveness of national, local and European democratic institutions, perceived as insufficiently participatory, has been documented (Foa, Mounk, 2016). But the severity of the crisis in our democracies is today accompanied by a context of environmental, health, security and economic crises that are transforming decision-making processes (fragmentation, complexity, acceleration) and questioning the legitimacy of its players. Understanding the fragility of democracy necessarily requires a comprehensive approach, currently insufficiently developed, to all of the links and relationships between institutions and the actors who embody them, and citizens, both in terms of formal links (voting, political representation, etc.) and informal links (proximity between citizens and local governments, trust, etc.). **These are the three dimensions (conditions and renewal of deliberation, citizens' distrust of instituted powers, and institutional innovations) that Challenge 1 proposes to explore in a systemic way in response to the crisis democratic institutions.** As a counterpoint to the *top-down* perspective proposed by Challenge 1, the *bottom-up* perspective adopted in Challenge 2 aims to understand citizens' political practices and aspirations. For some researchers, the distrust of institutions can lead to increasing distance from the political system and can fuel support for authoritarian regimes or forms of expert government (Hibbing & Theiss-Morse, 1998; Caramani, 2017; Norris & Inglehart, 2019). For others, citizens,

especially the most precarious, aspire to take a greater part in making public choices by asserting the effectiveness of their rights or demanding new ones (Bayat, 2013; Scott, 1998; Spires, 2019). **Challenge 2 will mobilize intense interdisciplinary expertise on these issues to fuel action research aimed at experimenting with more inclusive democratic processes for marginalized citizens or those outside the mainstream.** The goal is to assess how shifts and changes in relationships that citizens on the margins, or outside institutional spaces, have with institutions contributes either to democratic deconsolidation or, conversely, to its revitalization. Alongside the vulnerabilities of democracies mentioned above, informational disorder – disinformation and misinformation – are considered major global risks (Wardle and Derakhshan, 2017) that threaten democratic cohesion, reinforce polarization, and weaken citizen participation (Clawson, 2021; Hunter, 2023). Research has illuminated how the media contribute to the polarization of public debate, how the web and socio-digital networks and information producers redefine modes of production and dissemination by modifying the “media regime” (Cesarini et al., 2024). It is critical to understand how current countermeasures are perceived and to assess their real impact on the spread of information disorder (Lewandowsky and Van Der Linden, 2021). **By combining approaches from semiology and discourse analysis with an integrated ecosystemic approach, Challenge 3 aims to shed light on these complex phenomena and thus strengthen democratic resilience.** The last major factor at the heart of the DemoCIS project addresses open and direct attacks on democracies (Brown, 2015; Lacroix, 2024): terrorist attacks targeting countries in the North, foreign powers conducting hybrid operations of digital influence and interference to influence electoral processes, the return of war to Europe that is threatening its democratic stability... These processes have generated a range of responses from governments. Numerous international and European organizations have warned of the risks of “shrinking democratic space” and a shift towards “illiberal democracies” (Jaume & Hourquebie, 2019; Buyse, 2018). Because of its academic specialization, the field of democratic studies has not given a central place to taking these threats into account and has given even less attention to the responses provided by institutional and civil society stakeholders. **The dialectic articulation of these threats and the responses provided by institutions and society will be at the heart of Challenge 4.**

Against this backdrop, DemoCIS intends to offer an innovative vision and contribution that takes into consideration recent advances in research.

- First, by studying democratic vulnerabilities from the point of view of institutions, how they function, and the imprint left by those who represent and embody them, as well as by analyzing the lived experiences of citizens, particularly those on the margins.
- Second, by studying the major risks and formal attacks threatening the functioning and stability of democracies, through the issues of disinformation, the weakening of media, direct attacks by terrorists, foreign interference, and open conflict.
- By adopting complementary methodological approaches that combine large-scale quantitative surveys, modelling, historical analysis, participatory research, and fieldwork. On the scale of the project as a whole, the combination of these approaches alone will make it possible to build a global and detailed vision of democratic fragility, to understand long-term dynamics and the lived experiences of citizens, to grasp local realities and, ultimately, to formulate better-informed recommendations to strengthen democratic resilience and provide decision-makers with material that will enable them to develop policies whose acceptability and legitimacy will be strengthened.
- By proposing the construction of permanent tools for the study of democracies and the strengthening of their resilience (the Democracy Barometer, the International Observatory of

DemoCIS

Democratic Practices and the University Institute for the Analysis of Public Opinion (IUAOP)) at the service of academic communities, public decision-makers and society as a whole.

Benchmark. Leading institutions in this field include **the Universities of Cambridge, Stanford, Amsterdam and Montreal**. The **University of Cambridge** is developing programmes of excellence in the field of spatial inequalities and their effects on political polarization and on decision making. It is also home to the YouGov-Cambridge Centre and POLIS, research hubs on media trust, disinformation, and misinformation. The **University of Amsterdam** is the European leader in research on informational disorder, via the ICDS initiative and various projects such as "AI, Media and Democracy" (<https://www.uva-icds.net/ai-media-democracy/>). The **Université de Montréal's** strengths include piloting a multi-disciplinary and multi-institutional Centre for the Study of Democratic Citizenship and running the Observatoire des profilages on the relationship between the police, civil liberties and the rule of law and digital threats. The **citizens' conventions deployed in various countries and the networks of stakeholders organized around them**, such as Participedia, the Stanford Deliberative Democracy Lab or the transnational program initiated by the European University Institute in Florence, provide concrete examples and resources on innovative deliberative mechanisms. DemoCIS will build on existing links with several of these universities (Stanford, Amsterdam, Montreal) that are supporting the project, to draw inspiration from these initiatives and coordinate a leading international network.

The DemoCIS consortium **stands out for its scientific excellence, disciplinary diversity** (Political Science, Law, History of Law, Education Science, Sociology, Geography, History, Economics, Linguistics, Philology, Philosophy, Literature, Management, Information and Communications Sciences) **and the complementary expertise and methodological approaches of the researchers and teacher-researchers brought together to participate in the project**. DemoCIS brings to bear research forces of considerable breadth and richness to enable the consortium to grasp the multiple facets of the democratic crisis and the responses that can be made to it both "from above" (institutions, media) and "from below" (citizens, associations, social networks, etc.), today and in the past. The strength of our consortium also lies in its **ability to focus on democratic phenomena at dif-**

ferent scales, from European institutions and national parliaments to working-class neighborhoods and rural areas. The DemoCIS consortium can boast of a high-profile thanks not only to the expertise of its researchers and teacher-researchers on international and national democratic issues, but also to a **strong territorial base** that is as close as possible to the experience of citizens and communities in everyday democracy. This enables the consortium to take a global approach to this issue rather than a piecemeal one. The other major strength of the DemoCIS project lies in its **unique expertise in participatory research and its leading role in the field (head of the GIS Démocratie et participation)**, enabling it to co-produce solutions with institutions and citizens.

2.3. Research questions, objectives and methods

Scientific and societal ambitions. Our ambition is to engage our interdisciplinary, national, and international research collective in an ongoing, reflexive dialogue with civil society and public, local, national and European actors, to provide responses to the **4 major challenges that make up the project's Scientific Workpackages**.

Challenge 1 (WP1) - Responding to the institutional crisis through democratic innovation: decision-making, deliberation and the evolution of institutional public spaces. Over a 3-year period, our aim will be to produce a diagnosis of citizen trust, of the democratic fragilities of institutions and of the potential for progress in terms of decision-making methods, rebuilding citizen trust and moving towards more democratic and inclusive institutions. **1.1 Deliberation, rhetoric and decision-making in a crisis context.** We will examine how contexts of radical uncertainty - environmental, economic, health and security crises - reshape institutions, impact the deliberative nature of decision-making and impact how citizens react to it. We will produce **case studies** and **analyses of the processes and modes of decision-making**, the place of experts in them, and the **content of the discourses and narratives that feed them** (reports and analyses produced by national and European executive bodies, political parties, NGOs, parliamentary work, etc.). Various **disciplinary approaches** (philosophy, machine learning, political sociology, etc.) will feed into this work, as will the first part of *the International Observatory of Democratic Practices*, designed to map the factors that weaken and strengthen **deliberative democracy in a crisis context**. **1.2 - Ethics in public life and public trust.** On the citizens' side, the analysis of existing quantitative data and the results of qualitative case-studies will make it possible to build a national and international repertoire of the forms of citizen distrust of institutions and public policies. The local level will also be investigated, in order to question the impact of proximity on the perception of the effectiveness of public policies and the direct relations between citizens and their local representatives. The data thus produced will serve as the basis for the first phase of the **Democracy Barometer - political programs and citizen confidence** (quantitative and qualitative surveys), focusing on the factors that weaken and strengthen democracy. With respect to **political leaders and institutional actors**, we will use the tools of law, philosophy, history and political science to analyze the processes of professionalization, of the reinforcement of the ethics of public life and of the fight against corruption, and their limitations. These analyses will feed into the *International Observatory on Democratic Practices*, in its section devoted to *the ethics of public life*, and the production of training guides on best practices for good governance, in conjunction with players such as the ICPC (<https://i-cpc.org>). **1.3- Democratic innovation and institutional reform.** Based on the plurality of conceptions and criticisms of representative democracy, and drawing on processes for assessing how institutions function, we will analyze how various democratic innovations are possible at the local level, particularly in so-called "peripheral" territories, but also at the national, European, and international levels. We will examine the use of established forms of participatory democracy and the potential to transforming voting

methods to combat abstention (online or postal voting, etc.) and extending their use (to the workplace, university, school, etc.). The production of a map of institutional mechanisms for democratic inclusion will feed into the third section of *the International Observatory of Democratic Practices*, which will focus on **practices involving citizens in public decision making**. This observatory will be nourished by field experiments and scenarios simulating the impact of new forms of participatory democracy (serious democratic games...). [Research methods](#). The production of *the International Observatory of Democratic Practices* will be supported by mapping existing institutional deliberative mechanisms, case studies and analyses of institutional and para-institutional productions. Action research will also be carried out, notably on the impact of new forms of participatory democracy. The construction of the **Democracy Barometer (Political Programs and Citizen Confidence section)** will be based on the **deployment of a panel survey** and will integrate a **qualitative survey** (interviews and focus groups with citizens) in France first and then abroad. We will also be rolling out the first theme of the **Citizens' convention, "Institutional reform and democratic innovation"**. [Over the next 7 years](#), we will formalize the first steps in the creation of an *Institut Universitaire d'Analyse de l'Opinion Publique (IUAOP)* focusing on Deliberative Democracy and Citizen Trust.

Challenge 2 (WP2) - Rethinking the places and forms of the expression of citizenship: Everyday citizenship and new spaces for democracy. Over a 3-year period, through 3 sub-challenges, our aim will be to assess how citizens experience their relationship with democracy and institutions, to make everyday citizen practices visible, and to analyze how citizens engage with or keep their distance from democratic innovations, by putting them into perspective with the history of mobilizations over time and in different societies. **2.1 Everyday relationships with representative democracy: backsliding and renewal**. In the wake of studies showing that individuals are increasingly willing to compromise with the core values of democracy - human rights, separation of powers, freedom of expression, equality before the law - we will investigate the trade-offs that citizens are prepared to make regarding the fundamentals of representative democracy, the ways in which other modes of "making democracy" (deliberative, direct, expert democracy, authoritarianism, etc.) are perceived and the extent to which they are perceived as compatible with liberal and representative democracy. The construction of this analysis will be based on the deployment of the second part of the **Democracy Barometer - Everyday Conceptions of Democracy** (quantitative and qualitative surveys). **2.2 The practices of everyday citizenship: between democratic fragility and renewal**. While a number of studies point to a tendency for everyday participation to become more fragile (restrictions on associative freedoms, resistance from those in power) our hypothesis is that the non-recognition of everyday citizenship and the knowledge it produces, in particular that of minority groups and/or those marginalized at various times (foreigners, women, people marginalized by gender, origin, poverty, etc.), contributes to democratic vulnerability. By setting up a series of **merging of knowledge** meetings involving teacher-researchers, professionals (e.g. city citizenship departments) and people with experience in citizenship "on the margins", our aim is to characterize the ways in which this everyday citizenship is expressed, and to study the day-to-day relationship of the ordinary citizen with the state and public services. Our long-term historical research will also enable an understanding of the citizenship, rooted in everyday life, of those who have been excluded from it. The *International Observatory of Democratic Practices* will thus include a fourth section devoted to **Past Citizen Initiatives** based on oral history interviews and analyses of digital archive sources.

2.3 Citizen experimentation, new spaces for democratic deliberation. New forms of civic engagement are leading to autonomous experimentation. Institutions are responding with deliberative public policies, which need to be analyzed in terms of how they are received by ordinary citizens. In

these experiments, participation biases and obstacles to the epistemic agency of ordinary citizens are clearly identified. The originality of this sub-challenge lies in tackling these issues through **action research** based on case studies in which the team has recognized expertise: in particular, health democracy, cultural mediation policies and the transmission of ideas and activist practices over time.

Research methods. The **quantitative** dimension of the **Democracy Barometer - Everyday Conceptions of Democracy** - will take the form of a panel survey and will also be based on a **qualitative survey** (interviews and focus groups with citizens). **Participatory research will be included in the Merging** of experiential, scientific, activist and professional **knowledge**. The **International Observatory of Democratic Practices** in its section devoted to **Past Citizen Initiatives** will be based on an **historical analysis** that will investigate archives and historical sources. **Biographical interviews and ethnographic studies** of everyday citizenship in various working-class areas will be carried out.

Over a 7-year period, our objectives will be to expand and sustain the **Democracy Barometer** and as indicated in Challenge 1, to integrate it into the **Institut Universitaire d'Analyse de l'Opinion Publique (IUAOP)**, which will gradually be set up. Challenge 2 will be mobilized to deploy the 3rd theme of the **Citizens' Convention: "Dematerialization, access to rights and public services"**.

Challenge 3 – Acting against the polarization of societies and information disorder: information and knowledge transmission (WP3). **Over a 3-year period**, our goal is to understand and model the mechanisms behind informational disorder systems, to develop analytical models for detecting systemic risks and to evaluate the effectiveness of existing solutions and countermeasures in curbing the spread of informational disorders and the associated risks of opinion and social group polarization. This will be carried out through three sub-challenges.

3.1 Ecosystem dynamics of informational (dis)order. The aim here is to understand and model the propagation of informational disorder which weakens the functioning of democracies and transforms public space. We will study the socio-political and cultural contexts of informational disorder and model them as a complex ecosystem. By taking into account its various dimensions (users and producers of information and social media, technologies, discourses, countermeasures, regulations, territorial dynamics), will be able to visualize the dynamics of informational disorder. This work (analysis of a corpus of content, quantitative and qualitative analysis of data from a variety of sources) will feed into the construction of a **Dynamic cartography of changes in the information ecosystem**. In addition, these findings will contribute to an analysis of the role of experts in public discourse and its evolution.

3.2 Detecting systemic risks and developing indicators and tools for monitoring. Our aim here is to develop approaches for identifying threats and vulnerabilities in information systems. **Specific, measurable indicators** for each ecosystem dimension will be developed, to **quantify the risks that each component** represents for the propagation of information disorder. This work will enable us to build **Analytical Models of critical ecosystem components** and their interactions that are likely to generate **systemic risks**.

3.3 Countermeasures to informational disorder. The assessment of the effectiveness of existing solutions and countermeasures designed to mitigate information disorder requires a multi-level approach, encompassing the analysis of the interaction between legal, technological, educational, professional, and cultural solutions. This will entail: i) conducting experiments to assess the efficacy of countermeasures (in particular, those implemented by platforms under the Digital Services Act (DSA) on modifying user media behavior); ii) analyzing the influence of professional and legal standards on stakeholders in information production; iii) studying the professional practices of these stakeholders in regulated environments; iv) analyzing the implementation and impact of institutional recommendations in the field of education, with a view to implementing pedagogical experiments. The findings of this research will inform the development of a **Framework Program** for Evaluation and Intervention of Countermeasures, **which will include a vademecum for**

experts, best practices for professionals, and a train-the-trainer program in collaboration with the Ecole de journalism de Lille and Instituts nationaux supérieurs du professorat et de l'éducation (INSPEs). Furthermore, awareness-raising actions for the general public will be conducted, including the Fresque de la désinformation. Research methods used. The ***Dynamic Cartography of Changes in the Information Ecosystem*** will be fed by a **corpus of content** representing the characteristics of information disorder and quantitative and qualitative analyses of data from a variety of sources. The construction of ***analytical models of critical ecosystem components*** and initial hypotheses for the prototyping of a ***proactive threat and vulnerability monitoring tool*** will be based on quantitative work and dynamic network modeling (Social Network Analysis (SNA) techniques), as well as content analysis, data mining and qualitative surveys. The development of the ***Framework Program*** for Evaluation and Intervention of Countermeasures will mobilize complementary approaches: participant observation in editorial offices and schools, laboratory and field experiments, participatory research, documentary analysis, ethnographic surveys, semi-structured interviews and empirical studies. Over the next 7 years, based on stabilized models and the prototype ***Proactive Threat and Vulnerability Monitoring Tool***, we will move to a **predictive** approach to anticipate the evolution of potential risks and adapt solutions accordingly. We will then deploy the 4th theme of the ***Citizens' Convention: "Democracy, (dis)information and freedom of expression"***.

Challenge 4 - Strengthening threatened democracies: democratic conflicts and insecurities under the rule of law (WP4). Over a 3-year period, through two sub-challenges, our aim will be to propose a comprehensive analytical framework on radicalization processes, political violence and hybrid attacks targeting democracies, as well as on new conflictualities affecting the rule of law and fundamental freedoms. **4.1 Democracies under attack: terrorism, political violence and hybrid threats.** This sub-challenge will deal with three threats: Salafi-jihadist terrorism; so-called "subversive" political violence; and hybrid threats, particularly in their cyber dimension. Analysis of the first two is limited by the difficulty of gaining access to the perpetrators of the attacks. To fill this gap, we will build **detailed databases** to conduct ***sociological and historical analyses of radicalization processes and political violence***: i) profiles and life paths of jihadists imprisoned or having been imprisoned in France, ii) acts of so-called subversive violence committed by supremacists, vigilantes, conspiracy activists, etc., iii) life paths and radicalization processes of far-right activities. Historical research will also be carried out on state services and agencies responsible for combating foreign digital interference, and two surveys will be carried out, one on the criteria used by Viginum agents to decide on banning of digital content, and the other on cooperation between democratic states within the FAST network to combat cyberattacks. The aim of all this work will be to draw up an ***inventory of the measures in place to combat hybrid attacks on democracies: national organizations, European defense and international cooperation.*** An ***international research network on radicalization and political violence*** will also be set up, drawing on existing databases and partnerships (GERN, Université Libre de Bruxelles, etc.). **4.2 Weakened democratic defenses: rule of law and civil liberties.** The restriction of fundamental freedoms and the closure of democratic opportunities have led to an increase in social conflict. This sub-challenge will study these new forms of conflicts, their public regulation, and their impact on the rule of law and public freedoms, focusing on two areas: police-population relations on the one hand, and fundamental freedoms of political participation on the other. The first three years will be devoted to i) **producing a database and a cartography of restrictions on fundamental freedoms of political participation** at a European scale, based on data collected by partner observatories, ii) **conducting research** on the current ideas of the notion of "militant democracy" and in particular **prohibition and dissolution as**

**APPEL A MANIFESTATION D'INTERET
« PROGRAMMES DE RECHERCHE EN SCIENCES
HUMAINES ET SOCIALES »
2024**

**DOCUMENT PRESENTATION PROJET
(VERSION DU 10/07/2024)**

DemoCIS

procedures of democratic regulation, and iii) launch 2 **action-research projects** focusing on conflicts between local authorities and associations, police-population relations (which will be the subject of a citizens' convention in 2028). The results of this work will feed into **the International Observatory of Democratic Practices**, in its section **dedicated to New conflictualities and public regulations**. It will be supported by our consortium and its **Interdisciplinary Research Network on the Rule of Law and Fundamental Freedoms in France and Europe**, which draws on the Jean Monnet ProValUE Chair, the GIS Euro-Lab and the GIS Democracy and Participation. [Research methods](#). **Sociological and historical analyses of radicalization processes and political violence** will be based on judicial, administrative and prison archives. Two surveys (Viginum and the FAST network) and the research expertise of partners such as the CyberAlps Institute and UGA's Multidisciplinary Institute in Artificial Intelligence will be **used** to produce an **inventory of the measures in place to combat hybrid attacks against democracies**. The construction of the **International Observatory of New Conflicts and their Regulation** will be based on qualitative methods: archives, interviews, analysis of jurisprudence, etc. The second theme of the **Citizens' Convention, "Police-population relations"**, will be deployed. [Over a 7-year period](#), we will further internationalize our research networks and deepen our research on democratic mediation mechanisms in certain areas (Lille, Grenoble, Lyon, the Ile-de-France region) for the regulation and management of local conflicts, in partnership with institutions and civil society.

2.4. Terms of action

The project is structured around the following six work packages (WPs). **Implementation of WP0 - Operational management of the project**. Operational management of the project is the responsibility of the DemoCIS project management and scientific coordination team, which is in charge of i) overall management of the project (Scientific Coordinator - Julien Talpin), ii) deployment of the project's actions (management team) and iii) coordination of the support resources

WP0 : Operational management of the project (U Lille : Coordinateur Scientifique - Julien TALPIN et Project Manager)	
WP1 : Challenge 1 - Responding to the institutional crisis through democratic innovation: decision-making, deliberation and the evolution of institutional public spaces (Coord. : U Lille/Science Po Lille & Lyon 3)	WP5 : Transverse actions (Coord. U Lille)
WP2 : Challenge 2 - Rethinking the places and forms of the expression of citizenship: Everyday citizenship and new spaces for democracy (Coord. : U Lille & UGA / Sc. Po)	ACTION 1 – Support for public policies 5.1 Citizens' Convention for Democracy (U Lille/UGA) 5.2 Expertise (Coord. Science Po Lille / CY-Science Po Saint Germain-en-Laye)
WP3 : Challenge 3 - Acting against the polarization of societies and information disorder: information and knowledge transmission (Coord. : IMT & ULille)	ACTION 2 - DemoCIS Platform & science-society link (Coord. U Lille)
WP4 : Challenge 4 - Strengthening threatened democracies: democratic conflicts and insecurities under the rule of law (Coord. : U Lille & CY / Sc. Po St Germain en Laye)	ACTION 3 - Technological development (Coord. Inria / U Lille)
	ACTION 4 – Data Management (Coord. CNRS / ULille)
	ACTION 5 – Development of the national and international DemoCIS network (Coord. CNRS / U Lille)

provided by each institution (monitoring of publications, setting up of European projects, support for the Science-Society link, support for public policies and transfer). The articulation of the project's deployment with the policy and support of each institution, particularly in terms of doctoral policy, will be ensured by the University of Lille's Vice-Presidency for Research in the Human and Social Sciences, in collaboration with the research vice-presidencies of the other institutions. **Deployment of WP 1 to WP4 - the project's scientific work packages**. Each work package is steered by a pair of scientific coordinators responsible for i) scientific leadership within the work package in an interdisciplinary and interinstitutional context, ii) ensuring that the projects carried out under the work package's sub-challenges are properly coordinated, and iii) overall coordination and monitoring of the deployment of actions in support of public policies and the transfer of knowledge to society. Each sub-challenge is supported by a pair of scientific leads in charge of deploying and steering DemoCIS

research projects, which benefit from internal resources. The DemoCIS project will not launch calls for projects: the first structuring projects have already been identified for the first 3 years (see Section 5.3 "3-year action plan"). The DemoCIS scientific program will be evaluated and updated at mid-term. **Implementation of WP 5 - Transverse actions.** Action 1 - Support for public policies. This action will support the implementation of the **Citizens' Convention for Democracy**. After a first year of methodological preparation, the drafting of a *Methodological guide for inclusive citizens' conventions* and the development of an inclusive digital tool enabling the use of the hybrid format, the Citizens' Convention will successively address 4 democratic issues over the duration of the project (18 months per issue), articulated with the research projects developed in the challenges and carried out by an establishment on whose site the convention will take place: 1) Institutional reforms and democratic innovations (Université de Lille), 2) Police-population relations (CYU/IEP Saint Germain en Laye), 3) Dematerialization, access to rights and public services (Université Grenoble Alpes), 4) Democracy, (dis)information and freedom of expression (Université de Lille). Action 1 will also support the **coordination of the promotion and dissemination of DemoCIS expertise** and give rise to a harmonized policy for the production and **dissemination of policy briefs, policy papers, white papers, etc.** in formats adapted to the target audience. Action 2 – DemoCIS Platform & science-society link, coordinated by the Université de Lille, will focus on the creation of the **DemoCIS living platform for democracy**, ensuring the dissemination of the project's various outputs: data and research results, expertise produced, video content, podcasts, MOOCs, etc. This action will further provide logistical and financial support for the deployment of a **DemoCIS education program.** Action 3 - Technological development and support, co-managed by Inria and the University of Lille, will coordinate responses to the needs for **technological development and support** (1 dedicated FTE developer) of the project's 4 challenges (e.g. production of the Democracy Barometer, the platform for monitoring threats and flaws linked to the spread of informational disorders) and the **creation of cross-functional support tools** (DemoCIS platform, inclusive digital tool for the Citizens' Convention). Action 4 - Data management, co-managed by CNRS and the University of Lille (1 dedicated FTE), will be responsible for creating a data management plan and implementing it in line with FAIR principles. It will draw on the Huma-num IR* and PROGEDO IR*s, as well as on consortium members' *University Data Platforms* and their dedicated tools and services. Action 5 - Development of the national and international DemoCIS network, co-sponsored by CNRS and the University of Lille, will coordinate the organization of **recurring trips to stakeholders and key scientific events** (DemoCIS Symposium), and the structuring and extension of the DemoCIS network, drawing on the many national stakeholders (Universities of Nantes, Paris 8 ; Limoges, Avignon, GIS Démocratie et participation, Maisons des Sciences de l'Homme et de la Société) and international stakeholders in the project, as well as CNRS units and networks abroad.

2.5. Production types

Types of research products envisaged throughout the project. DemoCIS research products will take a variety of forms. **Productions that enable us to take stock of and monitor democratic realities, fragilities and strengths**, in particular through the creation of cartographies (national cartography of institutional mechanisms for democratic inclusion (challenge 1); dynamic cartography of changes in the information ecosystem (challenge 3); mapping of restrictions on the fundamental freedoms of political participation (challenge 4)), databases (databases on past citizen practices (challenge 2), on the processes of radicalization and political violence (challenge 4)), a Democracy Barometer, fed by qualitative and quantitative studies, which will give rise to the Democracy Barometer Estates (challenges 1 and 2), a platform for observing and analyzing the dynamics of information

disorder (challenge 3). **Products that directly support public policies, public decisions and best practices:** the Citizens' Convention (which will mobilize the services of Huma-num IR* for automatic transcription and hot storage, as well as collaborate with Inria for *topic modeling*), guide and charter (guide on inclusion in democracy in connection with the Citizens' Convention on inclusive democracy (challenge 2), methodological guide for inclusive citizens' conventions, training/guidance for civil society stakeholders to better defend fundamental rights (challenge 4)), reports, white papers, policy briefs (white paper on the dynamics of interaction within the information ecosystem (challenge 3)), democratic mediation systems to regulate local conflicts. **Policy for disseminating research productions and other work carried out as part of the project, in France and worldwide.** The dissemination will be organized through the DemoCIS platform, national and international symposia and the two international DemoCIS symposia to be held over the next 2-3 years and 6-7 years. The consortium will draw up periodic reports and produce policy briefs, guides and ethical charters for decision makers and develop awareness-raising initiatives for the public and targeted at specific audiences. **Open science initiatives.** A data management plan, in line with FAIR (Findable, Accessible, Interoperable, Reusable) principles, will be implemented under the responsibility of the Operational Steering Committee (including a dedicated data management engineer), in liaison with the PROGEDO IR*s and the Huma-Num IR*, ULille and partner university data platforms, the LORD workshop (Lille Open Research Data) and data management tools deployed by the sponsor and partners (Lillodata, the Research Data Gouv space dedicated to research data at the Université de Lille). Project publications will be open access via a HAL DemoCIS collection.

3. Societal component

3.1. Benchmark

The DemoCIS project has drawn on best practices to guide the design of its public policy support, dissemination and transfer activities, in particular those implemented by the Universities of Stanford, Montréal, Amsterdam, and Cambridge.

- **Collaboration with public decision-makers:** the Amsterdam Institute for Social Science Research (AISSR) works with local governments, such as the City of Amsterdam, to propose policies for inclusion and citizen participation.
- **Accessibility of research outputs:** Cambridge University's Centre for the Future of Democracy produces reports on critical issues such as the rise of populism and the loss of confidence in democratic institutions. These reports are distributed to policymakers and NGOs and are regularly cited in the international media.
- **The valorization of research, through training programs for public decision-makers.** In particular, the Stanford Cyber Policy Center offers training and workshops for policymakers, aimed at providing them with the tools they need to understand and combat digital threats such as disinformation and electoral interference.
- **Actions ensuring the Science-Society link** - Action research and citizen participation: Amsterdam Institute for Social Science Research (AISSR) is renowned for its participatory research projects, in which teacher-researchers work directly with citizens, NGOs and local authorities to co-construct solutions to democratic challenges. For example, research on participatory democracy in the Netherlands directly involves citizens in the research process.

DemosCIS' ambition is to propose systems inspired by these best practices, fed by the results of the project research, in support of public policy and citizen involvement.

3.2. Support for public policy and decision-making

Against the backdrop of the democratic crisis described above, DemoCIS's primary objective is to facilitate a more nuanced understanding of democratic fragility and the potential avenues for its re-consolidation through institutional innovation and reform. Our endeavor is to cultivate and evolve the conceptual frameworks and operational practices of decision-makers, encompassing elected representatives, institutional actors, and socio-economic stakeholders. Furthermore, we seek to bolster their actions by equipping them with the necessary tools and levers for adapting public policies and fostering active and inclusive citizenship. First and foremost, the **Citizens' Convention** will place citizens' voices at the heart of the DemoCIS project and draw on the research developed within the challenges to add to **the political agenda the changes required for better democratic governance** around the four key issues that will punctuate it. The debates and productions of the Citizens' Convention (policy papers, guides, topic modeling, etc.) will be used and disseminated to institutions and public stakeholders, to propose the necessary institutional and structural reforms, guide public policies and encourage the adoption of best practices. **Action-research** projects will be developed throughout the project, drawing on numerous institutional and associative partnerships (Ministries of Justice and the Interior, Défenseur des droits, Ville et Banlieue association, FFSU, CESE, ATD Quart Monde, FCSF, etc.): 1/ **action-research on Everyday Citizenship in working-class environments**, in collaboration with the University of Montréal; 2/ **action-research on the management of democratic conflicts**, to analyze the relationship of political staff to criticism, counter-power and citizen mobilization, **conducted with volunteer local authorities** linked to partner establishments located in Lille, Grenoble, Saint-Germain-en-Laye, Lyon, Limoges, Nantes and Saint-Denis; 3/ **action-research on police-population relations**. This will be informed by the Citizens' Convention on this issue (to be held in 2028), the results of which will then be applied and tested with the project's partner communities. These action-research projects will also feed into **training modules and workshops** for elected representatives and public officials. Support for public policies and decision-makers will also involve the development of the **DemoCIS researcher-expert program**. The expertise of the researchers and teacher-researchers involved in the project will be showcased on the DemoCIS platform through the creation of a directory of experts and an online solicitation system. Specific action will be taken to develop the skills of DemoCIS doctoral students as researcher-advisors through doctoral student-advisor training and mentoring, drawing on the **Consolid network** (a team of doctoral student-advisors at the University of Lille), which will gradually be deployed on partner sites. A **policy of expert communication of research results to institutional and media players** will also be implemented to ensure that the **research produced feeds into public and institutional debate**. The research results will be disseminated using media tailored to the target audience (reports, guides, policy papers, etc.), and will focus in particular on the project's central findings: The **governance** of DemoCIS, and the **Advisory Board** in particular, **including** representatives from public institutions, associations and civil society, will provide a forum for ongoing dialogue between the project's academic community and the public sphere, enabling the research to address the priorities of decision makers and, in turn, guide public policy support.

3.3. Transfer, dissemination and exploitation to society

Through its policy of transfer, dissemination, and valorization, DemoCIS aims to **make the knowledge produced accessible** to various target audiences: citizens, institutional stakeholders at local, national and European levels, associations and the media, with the aim of reducing the gap between citizens and decision makers. First and foremost, the aim is **to improve citizens' sense of political competence** by disseminating and promoting the knowledge gained from citizens' life

experience, made visible through participatory research and Citizens' Conventions, which should also be promoted to institutional players. We will also need to **share the diagnoses of democratic fragilities and insecurities**, and the **levers identified by the project to respond to them**, in collaboration with the European Alliance Eutopia, a stakeholder in the project, which contributes to the construction of the European educational space, with an interest in the question of democracy and public space. **To this end, the DemoCIS living platform for democracy** will play a key role in ensuring open access to the project's data and products. A range of media will be developed to provide easy access to research results for a variety of audiences. **Podcasts, videos, and virtual exhibitions** will be designed and distributed (on target themes: "Making the invisible visible", "Citizen experiments", etc., and around the Democracy Barometer). In addition, **training systems and tools** will be designed i) **for the public** (development of MOOCs, video capsules based on research findings, Fresque de la désinformation, etc.), ii) **for trainers, teacher-researcher, and students**, based on a partnership with the rectorats of consortium member sites, the INSPEs (Instituts national supérieur du professorat et de l'éducation) and those involved in training trainers. **Workshops, forums and exhibitions** will be organized to enable citizens to take ownership of the results of the research carried out. For example, a **traveling exhibition** will be proposed (dedicated programming for the 2027/2028 season **of the Xpérium**, a mediation tool enabling visitors to discover **research in the making**). It will then be displayed at the partners' sites via their Maison des sciences de l'Homme (MSH) and may also be taken up at the MSHs in Brussels, Liège and the Maison française in Oxford. The **MSH network** could also be mobilized to organize a **concerted scientific mediation action**, inspired by the **Printemps des SHS** organized each year by the Maison européenne des sciences de l'homme et de la société de Lille (the 13th edition in Spring 2022 was dedicated to Democracy). DemoCIS research will also be showcased on the **"Grande enquête"** television program, with a **special edition** devoted to it, broadcast on the **"Esprit sorcier TV" channel**, co-produced by the University of Lille as part of the "Science avec et pour la Société" (SAPS) label. Collaboration with **the Ecole Supérieure de Journalisme de Lille** and its **media network** will also ensure that DemoCIS research is relayed to the public. A partnership with **The Conversation**, an independent online media platform, will also enable the project's academic community to regularly publish scientific mediation articles to share the progress of the research carried out. DemoCIS's contribution to the rebuilding of democracy will also involve **raising awareness among elected representatives and public and institutional players** of the conditions required to restore public trust. **Tailor-made continuing education modules** will be developed, with the support of the facilities, skills, and internal resources of the consortium's member institutions, including the Exist program (*Executive Program in Innovation and Social Transitions*) of the Université de Lille. Training initiatives will be designed in conjunction with local authorities, within the framework of training agreements between the authorities and the university. These training courses, developed in partnership with the Centre national de la fonction publique territoriale (CNFPT), will focus on the right to participation for territorial executives, and on the management of democratic conflicts.

4. Signature of the institution

4.1. Support for the project

In line with the dynamic development of HSS within the institution, and in view of the central place occupied by the theme of democracy in its scientific strategy, the University of Lille will provide significant and diversified support for the deployment of DemoCIS:

- **Thesis funding and international development:** the University of Lille will contribute directly to the pool of young researchers by funding 3 theses from the SFRI GRAEL project, aimed at training

through research in the university's areas of excellence. In terms of international development, the university will assign two FTEs to the project as part of the ASDESRLille team dedicated to **setting up European projects** in HSS (France 2030 ASDESRLille project) and will mobilize its guest speaker funding scheme as well as its MobLilEx scholarship scheme to support the mobility of post-docs.

- **Setting up a reinforced project management environment:** the project environment will be integrated into the institutions' Transversal Project Engineering and Management Department (DTIMP - SAIC) to support its **administrative and financial management**.
- **Strengthening the resources for governance and for measuring the impact of HSS research:** the university will mobilize an FTE in charge of **monitoring publications and research productions, and of tracking indicators** linked to the project. This project will provide an opportunity to initiate in-depth work between partners to simplify the collection, storage and access to HSS research data, and to **develop reliable indicators** by cross-fertilizing experiences with monitoring and analysis tools currently being developed within some of the consortium's institutions (Lillanalytics-Université de Lille; BiblioRef-Université de Lyon 3): tracking research projects, scientific production dashboards, exhaustive data on mobility, post-docs...
- **Acceleration of actions dedicated to supporting public policies and the science-society link:** The project's efforts to promote dialogue between science and society will be boosted by the mobilization of its "Science with and for society" label (co-production of a biannual "Esprit sorcier TV" event dedicated to scientific mediation, organized with the Ombelliscience association, and showcasing research results with Xpérium). In terms of support for decision makers, one FTE from the ExIST program - Executive Program in Innovation and Social Transitions - will be mobilized to accelerate the development of the DemoCIS continuing education offer for public decision makers;
- **Supporting the open science project:** in line with the University of Lille's ambitious policy of opening up research, in 2018 the University created an open institutional archive, LilloA (linked to the national HAL archive), carried out a number of precursory actions in the field of research data management. This support will involve the University of Lille's Service commun de la documentation and will focus on the development and implementation of a data management plan and the dissemination of open-access research products in accordance with FAIR principles.

4.2. Transformative nature of the project for the lead institution

The DemoCIS program aims to accelerate the structuring of HSS within the University of Lille, particularly on the theme of Democracy, which already accounts for a significant proportion of the institution's HSS scientific output. This expected structuring primarily concerns the **reinforcement of training through research on democracy and the university's doctoral policy**. DemoCIS will involve several doctoral students in its research projects (financed via grants awarded to the project and 3 thesis grants awarded by the university, in addition to the theses currently underway on this theme), with a strong commitment to internationalizing the career paths of these doctoral students and training them to become experts, in conjunction with *Consulid*. DemoCIS's Lille-based teacher-researchers and researchers will also be mobilized as part of the graduate research training programs of the SFRI GRAEL project of excellence to train master's students. The "Changing Cultures, Societies and Practices" Graduate Program will also provide a pool of high-quality PhD candidates, trained in the best practices of education through research. DemoCIS will also accelerate the **creation of an Interdisciplinary Institute on Democracy and Citizenship**, in line with the ongoing development of the university's *Changing Cultures, Societies and Practices Hub*, and the momentum for the creation of interdisciplinary institutes on the site. This institute will combine research activities, open to the university's ecosystem of national and international academic partners strengthened through DemoCIS, with training through research and transfer.

4.3. Role of partners and stakeholders in the project strategy

The strategy underpinning the DemoCIS project is shared by all the members of the consortium, who are research-intensive institutions in the field of social sciences and humanities who place the issue of Democracy at the heart of their strategy. DemoCIS partners will be involved in the support and deployment of its scientific activities, through the steering of WPs and sub-WPs, the co-sponsorship of actions and the deployment of actions of WP5 (transversal actions), the contribution of approximately 10 thesis funding. The members of the consortium will also mobilize their services dedicated to linking science and society (labels SAPS), developing European projects, continuing education and research data development and management.

5. Implementation

5.1. Trajectory

The first year of the project will be dedicated to setting up the operational means to manage the project: recruitment of DemoCIS personnel (see financing plan) and installation of the governance. From years 1 to 3, we will i) deploy research projects already identified and ready to be implemented for each challenge, with inter-institutional and interdisciplinary research teams already established, ii) deploy the project's transverse actions and the first two themes of the Citizen's Convention, iii) Start building DemoCIS major results related to scientific workpackages and to transverse actions (see 3-year action plan).

A mid-term evaluation of the project will be carried out at the beginning of year 4 with the support of the Consultative Steering Committee, which will make recommendations for the second period of the project.

From year 4 to 7, we will continue to build on the major project results and develop the last two themes of the Citizen's Convention. This second period of the project will also be dedicated to intensively work around dissemination and valorization of the research results obtained in Phase 1 and implementing continuing education and actions for public actors and elected representatives.

To monitor and evaluate the implementation of the project, we will use the following performance indicators (see Appendix 8 for a complete vision of our target values for our performance indicators):

i) Enlarge our scientific community by 10% and increase scientific publications by 15% for each measurement reference date, ii) Build up major projects: European and ERC projects. We are aiming for 1 ERC in 2027 and 2 in 2032, with submissions balanced between individual ERC applications and synergy ERC applications, iii) Increase the number of PhD students whose thesis focuses on our themes: 245 in 2027 and 270 in 2032 and iv) Increase the number of tools and actions dedicated to the valorization of qualitative and quantitative data (16 in 2027 and 25 in 2032), actions for public policy support (60 in 2027 and 120 in 2032).

5.2. Governance, steering and management

The Steering Committee, comprising a representative of each partner, the project's scientific coordinator and the project manager, will decide on the project's strategic, scientific, and budgetary orientations. It is the body that validates changes in the project's budget allocation, particularly those arising from the mid-term update of the scientific program. Steering Committee decisions are taken by consensus, failing which a vote is taken with one vote per partner institution. An annual meeting is extended to all stakeholders to monitor the project's implementation and progress. The Scientific Board is made up of the coordinators of the project's scientific work packages and the coordinators

HUMAINES ET SOCIALES »
2024**

**DOCUMENT PRESENTATION PROJET
(VERSION DU 10/07/2024)**

DemoCIS

of the transverse actions. Chaired by the project's scientific coordinator, this committee oversees, with the support of the Project Manager, the deployment of the scientific project and cross-functional actions in liaison with the academic communities of the consortium members and stakeholders. The **Consultative Steering Committee** is made up of equal numbers of international academics and representatives of public institutions, associations and civil society. It is informed of the project's progress and results by the coordinators of each WP, whom it can interview. It also questions the teacher-researchers on democratic issues and makes recommendations on the project's scientific orientations (including a formal mid-term exercise to update the scientific strategy). The **Management Board** is made up of the scientific coordinator, the project manager and representatives of the support units for the various cross-functional actions (DemoCIS staff and partner personnel in charge of setting up EU funding and deploying Science-Society and transfer actions). It is responsible for implementing and monitoring the project's impact, by collecting and consolidating data for annual reviews and mid-term and final project evaluations.

5.3. 3-year action plan

Our key actions over the next three years will focus on the deployment of Project Management (WP0), Scientific Work Packages (WP1 to 4) and Transverse Actions (WP5).

Main actions and major deliverables
WP0: Installation of the Project Management Team and of DemoCIS governance. Setting up of DemoCIS monitoring tools and evaluation process. <u>Major deliverables:</u> Regular Meetings of the governance bodies, associated reports. Annual monitoring report of DemoCIS actions implementation and performance indicators. Preparation of DemoCIS mid-term evaluation.
WP1: Deployment of resources (thesis, research engineers and post-docs, missions, etc.) and research networks. Research activities: case studies and analyses, panel and qualitative surveys. <u>Major deliverables:</u> International Observatory of Democratic Practices, Democracy Barometer (political programs and citizen confidence).
WP2: Deployment of resources (thesis, engineers and post-docs, missions, etc.) and research networks. Research activities: panel and qualitative surveys, historical analysis, cross-fertilization meetings, ethnographic studies. <u>Major deliverables:</u> Democracy Barometer (Ordinary Conceptions of Democracy), International Observatory of Democratic Practices on Past Citizen Initiatives
WP3: Deployment of resources (thesis, research engineers and post-docs, missions, etc.) and research networks. Research activities: analysis of a corpus of content, quantitative and qualitative analyses of data, creation of analytical models, participant observation, laboratory and field experiments. <u>Major deliverables:</u> dynamic cartography of changes in the information ecosystem, analytical models of critical ecosystem component.
WP4: Deployment of resources (thesis, research engineers and post-docs, missions, etc.) and research networks. Research activities: creation of databases, sociological and historical analyses, surveys, qualitative work. <u>Major deliverables:</u> Sociological and historical analyses of radicalization processes and political violence, international research network on radicalization and political violence, International Observatory of Democratic Practices - New conflictualities and public regulations.
WP5: Installation of functional work teams for each action, in conjunction with the Management Team. <u>Action 1:</u> methodological preparation, drafting of a methodological guide for inclusive citizens' conventions and the development of an inclusive digital tool enabling the use of the hybrid format.

« PROGRAMMES DE RECHERCHE EN SCIENCES
HUMAINES ET SOCIALES »
2024**

**DOCUMENT PRESENTATION PROJET
(VERSION DU 10/07/2024)**

DemoCIS

Action 2: creation of DemoCIS living platform for democracy, dissemination of the project's various outputs, deployment of a DemoCIS education program. Action 3: coordination of responses to the technological development and support needs. Action 4: creation of a data management plan and implementation of it in line with FAIR principles and support to DemoCIS needs in terms of data treatment. Action 5: organization of international trips and major events (symposium), structuration and extension of the DemoCIS network. Major Deliverables: Action 1: Methodological Guide for inclusive citizens' conventions. 2 first editions of the Citizens' Conventions. Action 2: Operational DemoCIS living platform, DemoCIS education program and first period major dissemination actions. Action 3: Production of the Democracy Barometer, of the platform for monitoring threats and vulnerabilities linked to the spread of informational disorder and other technological development. Action 4: Data management plan. Action 5: First symposium, at least 3 international networks set.

5.4. Financing plan, sustainability

The total cost of the project is 77 612 889 €. The requested funding amounts to **9 118 821 € without management costs** (9 995 039€, including management costs). It breaks down as follows:

WP	TYPES OF COSTS	Requested funding
WP0 – Project Management	Project Manager (1), Communication expenses, Expenses related to the organization of governance and advisory body meetings, Discharges	875 521 €
WP1 to 4 – Research	Theses (12), post-doc (15), Research engineers (15), Research projects costs, missions abroad, DemoCIS thesis mobilities and Visiting professorships	5 672 800 €
WP5 – Transverse actions		2 570 500 €
<i>Action 1 - Support for public policies</i>	Personnel for convention organization (1), Costs for continuing education programs development	962 500 €
<i>Action 2 - DemoCIS Platform & science-society link</i>	Personnel to feed the DemoCIS platform (1), Development of digital resources, videos...	658 000 €
<i>Action 3 - Technological development</i>	Personnel for Technology development	350 000 €
<i>Action 4 - Data management</i>	Personnel for data management, other data management costs	350 000 €
<i>Action 5 - Development of the national and international DemoCIS network</i>	Networks implantation costs, symposium organization costs	250 000 €
TOTAL without management costs		9 118 821 €

An allocation of part of the subsidy (excluding management costs) is planned between the partners, corresponding to research actions ready for deployment in the first phase of the project. It is as follows: University of Lille - 4 244 061 € for research and to deploy cross-functional activities, University of Lyon 3 – 851 800 €, UGA – 563 040 €, IEP Grenoble – 375 660 €, CYU Université-IEPG – 724 400 €, IMT – 722 600 €, CNRS – 500 000 €.

The remaining funding will be allocated by the consortium committee for the second period of the project, taking into account the mid-term evaluation and recommendations of the Consultative Steering Committee. The consortium will ensure the sustainability of the project after the end of the France 2030 grant by mobilizing various sources of funding: - internal resources (mainly continuing education), ANR grants, European projects, subsidies from local authorities.

7. Appendices

7.1. Scientific leaders of the project

The CVs presented below are those of the DemoCIS scientific manager (Julien Talpin), the leaders and co-leaders of the challenges (WP) and sub-challenges of the scientific project.

Challenge 1 (WP1): Responding to the crisis of institutions through democratic innovation: decision-making, deliberation and the evolution of institutional public spaces: *Sandrine Levêque and Elise Untermaier Kerleo*

- 1.1- Deliberation, rhetoric and decision-making: *Mickael Cozic and Sami Makki*
- 1.2 - Ethics in public life and public trust. On the citizens' side, analysis of existing quantitative data: *Tristan Haute and Adrien Monnat*
- 1.3- Democratic innovation and institutional reform: *Jean-Philippe Derosier and Thomas Boccon-Gibot*

Challenge 2 (WP2): Rethinking the places and forms of expression of citizenship: ordinary citizenship and new spaces of democracy: *Marion Carrel and Frédéric Gonthier*

- 2.1 Ordinary relationships with representative democracy: backsliding and renewal: *Stéphanie Abrial and Alexandra Hyard*
- 2.2 The practices of ordinary citizenship: between democratic fragility and renewal: *Frédéric Gonthier, Hélène Quanquin and Jessica Sainty*
- 2.3 Citizen experimentation, new spaces for democratic deliberation: *Guillaume Rousset and Julie Bernini*

Challenge 3 (WP3): Acting against the polarization of societies and informational disorders: information and knowledge transmission: *Inna Lyubareva and Paola Pietrandrea*

1 « Converting ordinary resistance into collective action: Visibility struggles, discreet antiracist mobilisations and intermediation work in the French banlieues, "European journal of cultural and political sociology, 10 (1), 2022.	Best European Sociology Association (ESA) Article 2024 – focusing on the relationship between ordinary resistance and political participation of stigmatized groups
2 ESTEVES Oliver, PICARD, Alice, TALPIN, Julien, La France tu tu l'aimes mais tu la quittes. Enquêtes sur la diaspora française musulmane, Paris, Le Seuil, 2024.	This book – focusing on expatriation as an alternative path to voice and collective action – as received a large media and political coverage – it will be translated at Polity Press in 2025
3 Talpin, J. (2022). Why French racial minorities do not mobilize more often. Disempowerment, tactical repertoires and soft repression of antiracist movements. Ethnic and Racial Studies, 46(4), 749–770	This article is part of a special issue of the central journal on ethnic and racial issues, focusing here on minorities political participation in France – the article focuses on the institutional conditions of antidiscrimination mobilizations
4 « Democratic Innovations », in <i>Oxford Handbook of Social Movements</i> , Oxford, Oxford University Press, 2015	This article synthesizes the relationships between democratic innovations and social movements – stressing the central democratic role of social movements. It is part of the most central handbook on social movements.
5 « Les Français veulent-ils plus de démocratie ? Analyse qualitative du rapport des citoyens à la politique », <i>Sociologie</i> , 12 (1), 2021, p. 1-19.	This article stemmed from collective research on French citizens democratic aspirations: it emphasizes how much they are shaped by social and class factors, elites appeared the less attached to democratic processes.

1 « Party penalties for parity: less than meets the eye », French Politics (2020). https://doi.org/10.1057/s41253-020-00111-z (avec Amy Mazur, Eléonore Lépinard, Anja Durovic, et Catherine Achin)	This article examines the advantages and limitations of the financial penalty system implemented in France to compel political parties to field more women candidates in legislative elections. It investigates the rationales that lead parties to forgo a portion of their public funding
2 “Twenty Years of Parité Under the Microscope: Parties Play with Rather Than by the Rules”, in S. Lang ; P. Meier ; B. Sauer, Implementing Gender Quota, Basingstoke: Palgrave Macmillan, 2022. (avec Amy Mazur et Catherine Achin)	This article reviews the parity laws as they have been applied in France for nearly 25 years. While the number of women has indeed increased in political assemblies, parity has not radically disrupted the gender order in politics. The political space and its values remain dominated by men and masculinity.
3 “Un vote stratégique ? Des calculs individuels aux condition politiques et sociale de la recomposition des électeurs socialistes en 2017, in E. Agrikoliansky, C. Achin, P. Aldrin et alii, Ordre social, désordre électoral. Une sociologie du vote de 2017, Villeneuve d’Ascq, Presses du Septentrion, 2023.	This article discusses the strategic voting model based on a qualitative survey of electoral behaviors. The article demonstrates the limitations of this model, particularly when voters must make decisions in a context of uncertainty, such as the 2017 French presidential election.
4 « Mind the Gap ! De la variable sexe au genre des comportements électoraux », Travail, genre et sociétés, 31 octobre 2018, n° 40, p. 33-50 (avec Catherine Achin)	This article is a literature review on the electoral gender gap. It examines the advantages and limitations of various explanatory models for the differences in political participation and choices between women and men
5 Voter en temps de crise. Portraits d’électeurs et d’électrice dans la France contemporaine, Paris, PUF, 2021 Avec Eric Agrikoliansky et Philippe Aldrin (dir.),	Based on a qualitative analysis of voting, this book discusses the various models for analysing electoral behaviour. The approach consists of using panellised interviews to capture electoral behaviour and shows how political choices are interwoven into the trajectories of individuals.

What is the major contribution of this publication /Quel est l'apport majeur de cette publication ?

1	<i>Déontologie de la fonction publique</i> (PUF, sept. 2023) par Elise Untermaier-Kerléo, avec Jean-François Kerléo	This book takes a didactic and practical approach to ethics in the civil service. As such, it is a guide to the day-to-day work of every civil servant. It is also aimed at line managers, ethics officers and all those involved in ethics, who, through the advice they give, the checks they carry out and the sanctions they impose, help to ensure compliance with the obligations inherent in public office. This is a unique work, part of a new collection entitled 'Déontologie et droit' launched by the Presses universitaires de France.

2	Guide pratique - Maîtriser les risques d'atteinte à la probité dans les collectivités territoriales, oct. 2023, publication en ligne sur le site de L'Observatoire de l'éthique publique http://observatoireethiquepublique.com/nos-propositions/ouvrages/deontologie-de-la-vie-publique.html	This guide is intended for all those involved in local public life, whether local elected representatives or local civil servants, who contribute, within the framework of their respective missions, to the implementation of an approach to preventing breaches of probity within the local public sector. This guide brings together the views of the many contributors (local authority probity officers, representatives of the High Authority for Transparency in Public Life and the French Anti-Corruption Agency, lawyers, ethics officers), following on from their respective contributions to the Conference on Local Public Ethics organised by the Observatoire de l'éthique publique in Valenciennes in November 2022.
3	Livre Blanc de L'Observatoire de l'Ethique Publique et de la Chaire de droit des contrats publics - Pour un nouvel acte de la lutte contre la corruption https://www.observatoireethiquepublique.com/nos-propositions/livres-blancs/pour-une-loi-sapin-3.html	As part of the Observatoire de l'éthique publique and in collaboration with the Chair of Public Contract Law at Jean Moulin Lyon 3 University, Elise Untermaier-Kerléo and François Lichère, together with lecturers from several French universities, have put together proposals for reform aimed at combating corruption (Sept. 2023). This is a novel approach, since the authors have drafted a turnkey bill, complete with explanatory memorandum, with a view to participating in a new anti-corruption and ethics act. The aim was to initiate an open and transparent public debate on this key issue, so as to enable political leaders to take stock of the thinking and expectations of civil society in this area. This original approach was continued in June 2023 with the organisation of a workshop at the National Assembly, attended by the project's co-authors, several MPs from different political backgrounds, the chairman of the Haute Autorité pour la transparence de la vie publique (High Authority for the Transparency of Public Life), the director of the Agence française anti-corruption (French Anti-Corruption Agency) and several qualified person-

SCIENTIFIC PRODUCTION		
	5 publications/5 publications¹³	What is the major contribution of this publication /Quel est l'apport majeur de cette publication ?
1	Le fédéralisme sans l'État fédéral — La question de l'unité de l'Espagne et du Royaume-Uni, Mare & Martin, Bibliothèque des thèses, 2024, Foreword by Pr X. Arbós Marín and Preface by Pr Laquière, 780 p.	The importance of the idea of federalism in preserving the unity of democracy in regional states such as Spain and the UK.
2	« Vous avez dit unitaire ? — Brève réflexion sur l'organisation du territoire ultramarin français », Les cahiers des débats de l'Université, n° 2, 2023, p. 185-195	Demonstration of the emergence of a form of federalism in the overseas territories, often described as 'peripheral', in a France that remains a unitary state overall.
3	« Jan Patočka, philosophe mort pour les droits — Jalons pour une théorie générale des droits fondamentaux à l'aune de son œuvre », Liberté, Libertés — Mélanges en l'honneur du Professeur Armel Pécheul, IS Éditions, 2022, p. 93-108	This work shows the consubstantiality between political action, the democratic constitutional rules that frame it, and fundamental rights in the light Jan Patočka's writings.
4	« Quelques apports de la notion de semi-décentralisation à l'étude des administrations françaises », sous la direction de M. Degoffe, J.-D. Dreyfus, C. Fardet et A. Haquet, Les regroupements de collectivités publiques, Legitech, 2022, p. 261-278	In addition to providing an accurate picture of administrative collaborative practices, the notion of semi-decentralization makes it possible to take into account all administrations, despite their diversity and the multiplication of exceptions to the general model of the democratic unitary State.
5	Constitution de la République du Paraguay — Traducción al idioma francés (with J. Melgarejo Ragini et M. José Riego), Preface by Pr D. et J. Moreno, CEDEP et IPDC, 2021, 96 p.	This book presents Paraguay's first democratic constitution and provides a critical introduction to the first thirty years of political practice.

SCIENTIFIC PRODUCTION	
5 publications/5 publications ²³	What is the major contribution of this publication /Quel est l'apport majeur de cette publication ?
1 Carrel Marion, 2023, « Discreet Mobilizations Against Discrimination. Informal Participation in French Deprived Neighborhoods », <i>International Journal of Politics, Culture and Society</i> , n°36, p. 17–33	While disadvantaged neighbourhoods are often considered to be 'political deserts', discrete mobilisations of young people rooted in everyday practices are taking place. In small groups of individuals, they develop a mixture of sociability, mutual aid to 'get by' and awareness of social and racial inequalities. Observing this type of informal participation gives us an insight into the repertoires of protest of the powerless. The ethnography of the Zonzon 93 association, in Villepinte, Seine-Saint-Denis, contributes to our understanding of informal participation in a French context that puts the brakes on the process of politicising discrimination. The young people sometimes organise visible collective activities, but their mobilisations remain discreet because they do not display a militant message and articulate small acts anchored in everyday life, with caution. The political dimension is implicit in these discreet mobilisations and is built into the process of doing things together, experimenting and sharing activities with others. The power of identification with a leader, the attention paid to the personal narrative and the democratic dimension of 'doing things together' in informal practices are the main conditions for the emergence of discrete mobilisations. In the final analysis, they appear to be a substrate for awareness of discrimination and could fuel other forms of mobilisation.
2 Carrel Marion, « Pluralité des savoirs et puissance des injustices épistémiques. L'enjeu du pilotage et de la validation des démarches participatives », <i>SociologieS</i> , [En ligne], mis en ligne le 13 juin 2024	This article is part of the issue of <i>SociologieS</i> entitled 'Savoirs pluriels. Epistemological and political issues', coordinated by Baptiste Godrie and Marc-Henry Soulet, published in 2024 as part of the XXIIInd Congress of the Association internationale des sociologues de langue française (AISLF), Ottawa July 2024 on the theme "Sciences, knowledge and societies". At a time when science and participatory research are developing, we need to look at the more or less inclusive ways of 'producing with', in order to measure the effects on the perpetuation or reduction of inequalities within them. It is in the interests of all concerned to build this reflection on a dialogue between science and society, and not just from the point of view of academic researchers. Drawing parallels between the dilemmas and false pretenses of participation in various social worlds, the article explores the phenomenon of the redoubling of inequalities, a drama that is replayed in comparable ways in participatory democracy and participatory research. The second part, which focuses on the levers for combating social inequalities and epistemic injustices, explores the issues of plural steering and cross-validation of participatory approaches.

3	Carrel Marion, Godrie Baptiste, Juan Maïté (dir.), 2022 « Epistémologies radicales et recherches participatives », dossier de la revue <i>Participations</i>, 2022.1.	The term radical epistemologies refers to currents of thought that closely link demands for the pluralisation of knowledge systems to the reduction of social inequalities and the fight against discrimination. Rooted in feminist and postcolonial epistemologies in particular, they have developed a specific reflection on the production of knowledge in relation to cognitive justice and the democracy of knowledge. This dossier consists of a substantial introduction, a translation from English into French of the text 'Reconnaître la différence: pour une redéfinition du canon des savoirs', the introduction to a book edited by Boaventura de Sousa Santos and published by Verso in 2008, and five original articles reporting on participatory research. It helps to assess the impact of this work in terms of the epistemological and political claims it makes.
4	Talpin Julien, Balazard Hélène, Carrel Marion, Hadj Belgacem Samir, Kaya Sümbül, Purenne Anaïk, Roux Guillaume, <i>L'épreuve de la discrimination. Enquête dans les quartiers populaires</i>, Paris, PUF, 2021 (ré-édité en poche en 2023)	Based on a ground-breaking empirical survey of six working-class neighbourhoods in France and three in North America, conducted by a team of sociologists and political scientists, this book shows the consequences of the denial of recognition that surrounds discrimination: depression, exile, withdrawal. These ordeals, the accounts of which were collected in the form of 245 biographical interviews with a diverse panel of local residents, often give rise to anger and feelings of injustice. They sometimes lead people who were not prepared to get involved to do so. Young people get involved in associations, develop new knowledge and skills, and thereby gain the power to act. If we are to understand the experiences of people living in working-class neighbourhoods, we can't reduce them to social class alone. Other factors, including ethnic and racial ones, need to be taken into account. Far removed from any logic of identity, this scientific stance makes it possible to work towards the imperative of understanding that guides the social sciences.
5	CARREL Marion, 2013, <i>Faire participer les habitants ? Citoyenneté et pouvoir d'agir dans les quartiers populaires</i>, Préface de Nina Eliasoph (University of Southern California), Lyon, ENS Editions, collection « Gouvernements en question(s) »	The ethnography of participation provides information about the experiences of residents who take part, or not, in defining and evaluating the public policies that affect them. It illustrates the difficulties of building a public in working-class neighbourhoods, a phenomenon that fuels stereotypes between institutions and the population and provides a breeding ground for violence. In contrast, the observation of seven 'artisans of participation' enables us to analyse the conditions for moving from violence to democratic conflict, forcing institutions to justify themselves publicly and generating transformations that are both individual and collective. Prefaced by Nina Eliasoph, this book shows that the apathy of residents of social housing estates is only apparent. Under certain conditions, new forms of counter-power and empowerment, generated by deliberative activity, can emerge in working-class neighbourhoods.

SCIENTIFIC PRODUCTION/PRODUCTION SCIENTIFIQUE²⁸

5 publications/5 publications ²⁹		What is the major contribution of this publication /Quel est l'apport majeur de cette publication ?
1	Partisans like any other? How populist supporters assess the economy when their party is in office, <i>European Political Science Review</i> , 2023. DOI: https://doi.org/10.1017/s1755773923000206	Populist supporters have been found to take cues from populist incumbents. Yet, little is known about how they incorporate party cues in their political beliefs when populists are in office. This paper argues that citizens who identify with populist parties engage in partisan motivated reasoning more intensely than their non-populist counterparts because populist party cues strongly prompt them to process biased information. Results highlight a mechanism by which populist incumbents are likely to remain attractive despite their poor economic record. They have implications for our understanding of the mainstreaming of populist parties in Europe.
2	« On lâche rien ». Les demandes populistes en 2022, <i>Revue Française de Science Politique</i> , 2023, DOI: https://doi.org/10.3917/rfsp.724.0515	This article contributes to the literature on the normalization of radical populist parties by examining the relationships between populist attitudes and voting preferences in the French 2022 presidential election. It is shown that populist electorates are characterized by strong continuity between voting probabilities and actual votes, and between the two presidential elections in 2017 and 2022 respectively. These results corroborate the argument that the establishment of populist parties is likely to cement its voting base.
3	From the People, Like the People, or For the People? Candidate Appraisal Among the French Yellow Vests, <i>Political Psychology</i> , 2022 (avec T. Guerra), DOI: https://doi.org/10.1111/pops.12826	Whereas populist citizens are usually described as being driven by individual discontent, this article builds on the notion that they are also spurred by sociotropic concerns. Taking the French Yellow Vests populist movement as a case study, this piece addresses the mechanism by which discontent is directed into an instrumental orientation, and how this mechanism translates into voting choice. Results enrich extant literature on voter-politician congruency by suggesting that congruency between people-centrism and the prospects of more direct democracy is a way for populist citizens to make their vote choice.
4	How party polarization shapes the structuring of policy preferences in Europe, <i>Party Politics</i> , 2022 (avec T. Guerra), DOI: https://doi.org/10.1177/13540688211064606	A significant body of literature has addressed the impact of party polarization on voting behavior. The present study argues that party polarization enhances the ideological consistency of belief systems and does so for the citizenry as a whole. It first demonstrates that the more party systems are polarized on economic and sociocultural issues, the more consistently belief systems are aligned with the progressive-conservative continuum. Second, it evidences that ideological consistency is greater in highly polarized party systems, not only among the most politically attuned Europeans but also among those with lower levels of political sophistication. Results help better understand how citizens respond to elite cues in polarized party systems.
5	When ideological lenses crack. The joint effect of the Great Recession and clarity of government responsibility on economic assessments, <i>Acta Politica</i> , 2021. DOI: https://link.springer.com/article/10.1057/s41269-020-00148-6	Recent studies have found that ideology has less influence on economic evaluations in tough economic times. This article addresses whether this influence is equally constrained by clarity of government responsibility. It demonstrates that as the economy deteriorates, ideological differences in economic assessments tend to decrease in countries with single-party governments (i.e., high-clarity situations), while they remain steady in multi-party governments (low-clarity situations). This suggests that the effect of economic downturns on ideological conditioning can be dampened by the political context.

1 Abrial, S., Alexandre, C., Bedock, C., Gonthier, F., Guerra, T. « Control or Participate? The Yellow Vest's democratic aspirations through mixed methods analysis", <i>French Politics</i>, 2022, Special Issue: The Yellow Vest Movement in France: A Mixed Methods Approach, 20 (3-4), pp.479-503. (10.1057/s41253-022-00185-x). (hal-03782180)	By means of an original mixed-method research design, this article analyzes the French Yellow Vests' attitudes to democracy and democratic innovations. First, we find that Yellow Vests' protesters are supportive of innovations aiming at controlling elected representatives, and that populist attitudes enhance support for direct public control. Second, we provide evidence of two different discourses about democracy coexisting within the movement: one, stemming from inexperienced first-time activists, is centered on the control of political elites; the other, coming from more politicized Yellow Vests, rather advocates for direct citizen participation. This article therefore contributes to bridging the literatures on democratic issues in social movement, process preferences, and populism. In particular, we highlight that within 'populist' social movements, various democratic aspirations may cohabit, depending on how protesters define 'the people' and their experience of political protest.
2 Abrial, S., Frasque, F., Gonthier, A., "Des attentes démocratiques déçues", in Tiberj, V. et alii (sous dir.) <i>Citoyens et partis après 2022: Éloignement, Fragmentation</i>, Presses Universitaires de France, 2024, Hors collection, 978-2-13-086704-3. (halshs-04593087)	This publication provides an in-depth analysis of the evolving expectations of French citizens regarding the democratic system, challenging the notion of "democratic fatigue." It highlights three major transformations: Continuous Control over Representation: Citizens no longer settle for just voting; they desire ongoing engagement with their elected officials. Even satisfied voters, such as those who supported Macron, express feelings of dissatisfaction with democracy, illustrating a demand for more active participation. - Diversified Expectations: Citizens' expectations extend beyond electoral outcomes; they also include procedural and symbolic dimensions. They want to be regularly consulted and have the ability to hold their representatives accountable, reflecting an increased demand for representation. Appetite for Authoritarian Verticality: Some citizens express a need for leaders perceived as strong and capable of identifying with the people. This trend suggests a greater search for authority, in response to increasingly stringent and immediate democratic expectations. In summary, the publication reveals that, rather than disillusionment, there is a more complex and demanding quest for satisfaction in the relationship between citizens and their representatives, linked to a culture of immediacy in contemporary society
3 Abrial, S., Alexandre, C., Guerra, T. « Les Gilets Jaunes sous toutes les coutures. Sociologie politique d'un mouvement social à partir d'une enquête sur les réseaux sociaux », <i>Statistique et Société</i>, vol.9, n° 1 et 2, Juin 2021.	This article introduces an original methodological approach to capture the political preferences and sociology of the Yellow Vests protesters, using a web survey fielded on social network. The online mobilization of the Yellow Vests offers new ways for studying political activists and protest activities. The article reports the main steps of the survey design, both on the questions surrounding the identification of the survey population, the comparative dimension of the questionnaire, the motivations and limits of the methodology, as well as the first empirical results on the political preferences of the Yellow Vests.
4 Abrial, S., Persico, S., « Les coûts cachés d'une promesse incontournable. L'ouverture du mariage et de l'adoption aux couples de même sexe », <i>Revue française de science politique</i>, vol. 68, no. 2, 2018, pp. 343-364. 2018.	The major contribution of this publication lies in its in-depth analysis of François Hollande's political pledge regarding marriage and adoption for same-sex couples. It not only sheds light on the implementation process of this pledge but also questions the repercussions of such a realization on the political landscape. First, the article proposes a model for understanding the fulfillment of electoral pledges, highlighting the distinction between institutional capacity and political capacity. This reveals that, despite having a parliamentary majority, the government underestimated the mobilization of opponents, which influenced the pace and method of the reform. Secondly, it emphasizes the importance of the strategic choices made by policymakers, such as consultation and communication, in the success of a promise. This study therefore contributes to a better understanding of the political dynamics in our contemporary democracies and the challenges associated with implementing electoral promises.

5 Abrial, S., Brugidou M., Salomon, A-C, « Types idéologiques et classe résiduelle dans l'enquête d'Etienne Schweisguth, Les Français et la politique, 1982-1988 – Réanalyse à partir de deux familles de logiciels, CAQDAS et ADT. » <i>Recherches Qualitatives</i>, collection hors-série « Les Actes », n°21, Montréal, 2017.	In 1983, Etienne Schweisguth, a political scientist and research director at the CNRS, conducted a survey among ordinary citizens in a context examining the effects of the 1981 alternation in power. He highlighted several ideological types and a group of interviews that resisted this classification principle: the diverse. Our revisitation starts from this enigma, which also questions ordinary relationships to democracy. The reflection on the method and the modalities of its deployment is at the heart of our approach. The reanalysis we will propose is particularly carried out through the choice of "qualitative" analysis tools and software (ADT and CAQDAS).

5 publications/5 publications³⁶	What is the major contribution of this publication /Quel est l'apport majeur de cette publication ?
1 Hélène Quanquin. « From Lucy Stone to the Lucy Stone League: Women's Name Keeping in the United States and the Failure of Radical Marriage Activism in the 19 th and Early 20 th Centuries », <i>Massachusetts Historical Review</i> , "Marriage in American History," volume 4 (à paraître en 2025)	In this essay, I examine the transmission of « name keeping » for married women in the U.S. and its relative failure in the 19 th and early 20 th century, through the example of white women's rights activists Lucy Stone and the Lucy Stone League, created in the 1920s. I show how this "quiet" practice was deemed too radical for antifeminists as well as feminists themselves, who were reluctant to question norms and the institution of marriage.
2 Hélène Quanquin. <i>Men in the American Women's Rights Movement, 1830-1890: Cumbersome Allies</i> . New York : Routledge, 2020.	This book examines the history of the 19 th -century U.S. women's rights movement through the actions and discourses of its male activists from its emergence in the 1830s until the 1890s, when it was framed as a movement <i>for</i> and <i>by</i> women and when men's activism became less visible and central as a result. Based on the joint study of several family archives, including correspondences, convention proceedings and press articles, it is a collective biography of 9 men who were all involved in women's rights activism but had different personal and activist trajectories as well as different marital arrangements. This research shows that men did contribute to the emergence of women's rights ideas in the United States, but they also proved to be "cumbersome allies," sometimes drowning and suppressing women's voices while trying to control and narrow down the movement's agenda.

3	Hélène Quanquin, "Speaking back: Why, and How to Study Nineteenth-Century U.S. Women's Rights Movement?" <i>American Studies Journal</i> 68 (2019).	The starting point of this article was historians' growing public visibility, for instance through op-eds in the press and on social media, and the way the past has been used to shed light and/or to obfuscate current political debates in the U.S. As a historian of early U.S. feminisms and an observer of U.S. gender politics, I was interested in what I identified as the multiplication of references to the early women's rights movement in the political debates of recent decades. The essay focuses more specifically on 2 examples: the 2008 Democratic primaries; references to early feminists by contemporary "pro-life"—anti-abortion rights—groups. In this article, I studied the way 19th-century feminist issues resonate—"speak back"—in contemporary society as well as processes of appropriation and manipulation of history.
4	Hélène Quanquin, "'The Rights of Others': Wendell Phillips and Women's Rights." In <i>Wendell Phillips: Social Justice and the Power of the Past</i>, edited by A.J. Aiséirithe and Donald Yacovone. Baton Rouge, LA : Louisiana State University Press, 2016. 208-238.	This chapter investigates Phillips' women's rights activism through his personal correspondence with his wife as well as the many speeches he gave to defend gender equality. The starting point of the paper is the post-Civil War debates, during which Phillips defended the priority of Black male suffrage over woman suffrage. During those discussions, he maintained that the feminist (women) leaders who asked for women to be included in suffrage amendments defended "selfish" interests, while developing the notion that true, noble activism was the one of people fighting for "the rights of others." I however argue that Phillips' advocacy of women's rights was anything but disinterested as it was deeply personal, rooted in his relationship with his wife, Ann Greene Phillips, which I analyze in depth.
5	Hélène Quanquin, "'There Are Two Great Oceans': The Slavery Metaphor in the Antebellum Women's Rights Discourse as 'Redescription' of Race and Gender." In <i>Interconnections: Gender and Race in American History</i>, edited by Carol Faulkner and Alison Parker. Rochester : University of Rochester Press, 2012. 75-104.	The essay deals with the use of the slavery metaphor by white female feminist-abolitionist activists who were active in the fight against Blacks' enslavement, before the Civil War, i.e. at a time when slavery was still a reality in the South. The metaphor was often used to describe the situation of (white) married women, who were deprived of their autonomy and property due to restrictive marriage legislation. In this chapter, I concur with the interpretation of most historians that this use was an appropriation of enslaved Black women's experiences. Through the study of the personal correspondences of 3 white feminist-abolitionist activists—Angelina Grimké, Abby Kelley Foster, and Lucy Stone—I also show that it was often used as a way to solve conflicts that emerged at the intersection of the personal, the intimate and the political, as the slavery metaphor allowed them to think about the consequences of marriage on their activism.

1 Jessica Sainty, « Une participation citoyenne sans filtre ? Le cadrage discret des effets d'un budget participatif sur l'action publique par l'administration municipale », Gouvernement et action publique, 2023.	This article uses the case of a participatory budget (PB) to study the way in which a municipal authority can influence the content, form and practical possibilities of the influence of citizen participation on public action, by framing the projects resulting from this PB. In fact, the sectoral administrations have the task of operationalising the projects selected during the various annual waves of the BP, in order to convert them into concrete decisions. Through concrete observation of the administrative processing of projects, the aim is to show how the participatory process becomes a tool for filtering and aligning feedback from residents with the objectives set by the town council in terms of local public action.
2 Myriam Bachir, Guillaume Gourgues, Rémi Lefebvre, Jessica Sainty (dir.), Des citoyens à la conquête des villes. Les listes citoyennes et participatives lors des élections municipales de 2020, Paris, éd. du CNRS, 2023.	This collective work, co-edited by four authors, takes stock of the phenomenon of citizens' and participative lists that emerged during the 2020 municipal elections. Based on case studies and cross-cutting analyses, the book provides a tool for understanding the renewed dynamics at work in local politics. In this book, I co-authored a chapter that paints a portrait of these lists based on a statistical analysis of the lists and their candidates in some 300 French communes.
3 Gourgues Guillaume, Mazeaud Alice, Nez Héloïse, Sainty Jessica , Talpin Julien, « Les Français veulent-ils plus de démocratie ? Analyse qualitative du rapport des citoyens à la politique », Sociologie, 2021/1 (Vol. 12), p. 1-19. URL : https://www.cairn.info/revue-sociologie-2021-1-page-1.htm	This article presents the results of a survey of French citizens' attitudes to democracy, based on focus groups conducted in 2014-2015. The article shows that people's relationship with democracy depends largely on their social class, political orientation and commitment. Rather than disaffection with democracy, we have identified a democratic resignation, which leads citizens not to envisage a political system other than representative democracy.

4	Jacquet Vincent, Sainty Jessica , 2023, « La non-participation : l'envers des dispositifs de participation publique », <i>Participations</i> , vol. 37, n°3, p.7-29.	In this issue of the journal <i>Participations</i> , we present a summary of recent work on the non-participation of target groups in the participatory mechanisms proposed to them by public authorities or civil society. This introduction to the issue traces the problem of --non--participation and discusses the issues it raises in terms of the reproduction of social inequalities, the interweaving of structural trends and the contextualisation of particular mechanisms.
5	Sainty Jessica, « Les approches écologiques du vote : renouvellement et actualités d'un classique de l'analyse électorale », dans : Thomas Frinault éd., <i>Nouvelle sociologie politique de la France</i> . Paris, Armand Colin, « U », 2021, p. 189-200. URL : https://www.cairn.info/nouvelle-sociologie-politique-de-la-france--9782200628727-page-189.htm	This chapter provides a summary of work in electoral sociology and geography, developed within the framework of ecological and contextualist analyses of voting. This line of research, in which we are involved, provides a more detailed understanding of electoral behaviour by linking analysis of the 'heavy variables' in voting with analysis of the contexts and environments (social, political, territorial, etc.) in which voters live.

SCIENTIFIC PRODUCTION/PRODUCTION SCIENTIFIQUE ⁴²	
5 publications/5 publications ⁴³	What is the major contribution of this publication /Quel est l'apport majeur de cette publication ?
1 J. Bernini, « Plaise au peuple ». <i>Pratiques et lieux de la décision démocratie en Ionie et en Carie hellénistiques</i> , Ausonius éditions, Scripta Antiqua 173, Bordeaux, 2023.	This book takes a fresh look at Hellenistic democracies from a spatial perspective. It highlights the different ways in which citizens participated in the democratic life of their city.
2 J. Bernini, « Les prytanées hellénistiques et le politique. Le cas de Priène et de Magnésie du Méandre », <i>Revue Archéologique</i> 72, 2021, p. 293-326.	Based on two case studies, this article proposes a new approach to an emblematic place in the public space of Greek cities, the prytaneum. This study provides a better understanding of what the building symbolized for citizens and the role it played in the establishment of democracy in Hellenistic cities.
3 J. Bernini, « La topographie des décrets de Priène », dans <i>Visibilité, lisibilité, efficacité : les inscriptions monumentales en Grèce et à Rome</i> , CEA, 59, 2022	This study of the places where decrees are displayed in the public space of the Greek city of Priene has enabled us to identify the self-promotion strategies of certain families of citizens, who play with the codes of democratic communication to increase their social prestige.
4 J. Bernini, « Prendre le temps de la décision. Formule et procédure de report du vote de l'Assemblée à Argos à l'époque hellénistique », <i>Ricerche ellenistica</i> , 5, 2024, p. 9-33.	This article identifies a hitherto unknown institutional procedure in Argos, the postponement of voting, which extends the decision-making process. The study highlights the ability of Greek citizens to play with the institutional framework of their democracy to ensure the acceptance of decisions and the participation of as many people as possible.
5 J. Bernini, S. Lebreton, "Délibérer avec les dieux : attributs onomastiques et prise de décision à Athènes aux époques classique et hellénistique", dans <i>Dans le sanctuaire de Pallas. Bilan et perspectives du projet "Mapping Ancient Polytheisms"</i> , <i>Pallas</i> 126, 2024, p. 147-166.	This article combines the expertise of a historian of Greek democracy and a historian of Greek religion. It is one of the few reflections on the role of the gods in democratic decision-making in Athens and offers a new reading of the deities invoked by citizens to protect their deliberations.

What is the major contribution of this publication /Quel est l'apport majeur de cette publication ?		
1	I.Lyubareva, J.Nocetti (2024) : « La diplomatie numérique : évolution des stratégies diplomatiques et d'influence à l'ère (du) numérique », Réseaux 2024/3 N° 244, La Découverte	This paper contributes to the understanding of digital diplomacy as a flexible and underexplored field that bridges multiple disciplines, particularly emphasizing its evolution from e-diplomacy to tech-diplomacy. It notes that this area is notably underexamined in French research compared to Anglo-Saxon academia. By examining this shift, the paper highlights the increasing complexity of diplomacy in a globalized digital landscape and the critical role of technological expertise in contemporary diplomatic strategies. Additionally, it offers a fresh perspective on the significant transformations in influence strategies amidst rising political authoritarianism and conflict, demonstrating how the challenges of digital diplomacy and political influence are increasingly shaped by exponential privatization. This article opens a special issue on the theme of digital diplomacy under my coordination.
2	I.Lyubareva, F.Rochelandet, I. El Badisy (forthcoming, 2024-2025) : « Imitation of Business Models: The Case of Online News Industry in France », International Journal of Arts Management	In the rapidly evolving landscape of online business models within the news industry, the phenomenon of business model imitation has emerged as a prominent yet understudied aspect. This paper investigates the forms and implications of strategic imitation on competition dynamics and economic sustainability, focusing on French news producers from 2015 to 2020. Leveraging an extensive dataset and original methodology, our findings reveal a prevalent trend of imitation, particularly driven by rivalry-based dynamics. However, this copycat strategy poses long-term risks to industry performance and societal systems. To ensure economic viability and foster innovation, industry stakeholders must prioritize the development of original and forward-thinking strategies in response to the challenges posed by imitation.
3	I.Lyubareva, J. Mesangeau, N.Boudjani, I. El Badisy, L.Brisson (2021): « La plateforme des médias français et le ton du débat public : exemple de Youtube », Communication, 38 (2).	This empirical article examines the dynamics of aggressive debate within the participatory public sphere fostered by social media platforms like Twitter, YouTube, and Facebook. While these platforms were initially heralded for enabling ideal communication communities, they often devolve into 'brutalisation of debate,' marked by hostile confrontations. The study specifically investigates the conditions under which French media commentary on social networks exhibits such aggressiveness and identifies the factors that either mitigate or amplify this behavior. Utilizing a novel investigative approach that combines automated language processing with the political economy of media, this research fills a significant gap in existing literature by providing a comprehensive overview of aggressiveness in media participation. Notably, it formalizes the relationship between aggressive discourse, media characteristics, and audience dynamics, with a particular focus on YouTube—a platform recognized for its susceptibility to hostile exchanges. This contribution enhances our understanding of the interplay between social media environments and the nature of public discourse.

4	Lyubareva, I., Brisson, L., Bothorel, C., & Billot, R. (2020) : « Une plateforme de crowdfunding et son réseau social. » Revue française de gestion, 286(1), 135-151.	Crowdfunding has become a pivotal force in the cultural and information industries. In order to enhance the efficacy and impact of campaigns in these sectors, it is vital to gain a comprehensive understanding of the underlying dynamics and success factors of crowdfunding. This article makes a significant contribution to the field by elucidating the existence and impact of a cross-project social network on the Ulule crowdfunding platform, an aspect that has yet to be extensively studied. This article presents a synthesis of research on online groups and social factors in crowdfunding. It employs original methodology based on social network analysis to demonstrate that this cross-project social network has a catalytic effect on the success of funding campaigns. An empirical analysis of data from 2010 to 2016 identifies five sub-groups of contributors and shows that the success of funded projects is significantly impacted by thematic specialisation and collaboration within these groups.
5	I.Lyubareva, F.Rochelandet, Y.Haralambous (2020) : « Qualité et différenciation des biens informationnels. Une étude exploratoire sur l'information d'actualité », Revue d'économie industrielle, n° 172	Digital technology, through service innovations and the widespread use of social media, has influenced the quality of information goods. This is the case of journalistic information in particular. Yet, there is no consensual definition of quality and its measurement. In the literature, this notion often refers to different concepts and social expectations. This article proposes to use the economic model of vertical and horizontal differentiation to analyze the quality of journalistic information. Our study relies on the linguistic methods of discourse analysis to characterize the editorial choices of news producers. By comparing 93,000 press articles on 31 events between 2015 and 2019 and published by 55 representative news producers in France, we provide a mapping of the French media according to their choices of differentiation, and we assess, on this basis, the quality of journalistic information available on the market.

1	Bothorel C., Brisson L., Lyubareva I. (2021): "How to Choose Community Detection Methods in Complex Networks to Study Cooperation and Successful Organizations", Computational Social Sciences. pp. 16-36.	Discovering community structure in complex networks is a mature field since a tremendous number of community detection methods have been introduced in the literature. Nevertheless, it is still very challenging for practitioners to choose in each particular case the most suitable algorithm which would provide the richest insights into the structure of the social network they study. Through a case study of the French crowdfunding platform, Ulule, this paper demonstrates an original methodology for the selection of a relevant algorithm. For this purpose we, firstly, compare the partitions of 11 well-known algorithms. Then, bivariate map based on hub dominance and transitivity is used to identify the partitions which unveil communities with the most interesting size and internal topologies. These steps result in three community detection methods relevant for our data. Finally, we add the socioeconomic indicators, meaningful in the framework of the crowdfunding platform, in order to select the most significant algorithm of community detection, and to analyze the cooperation patterns among the platform's users and their impact on success of fundraising campaigns. In line with previous socio-economic studies, we demonstrate that the social concept of homophily in online groups really matters.
2	Bothorel C., Brisson L., Lyubareva I. (2023): « Online Platforms and Analysis of Community Dynamics ». In « Diversité des approches méthodologiques en sciences sociales » (Dir. I. Lyubareva et R. Waldeck), ISTE	This paper shows how social network analysis (SNA) enriches the analysis of online platforms via the exploration of interactions taking place within these interaction spaces. It utilizes two examples: the crowdfunding platform Ulule and the social media platform YouTube. The projects published on the Ulule platform fall into various thematic categories, such as video, music, art, education, technology and so on. Interactions on YouTube mainly take the form of users' reactions to different videos posted on channels. The chapter summarizes the interest of SNA methods for the analysis of the different community forms characteristic of online platforms. It suggests some avenues of further research and discusses more generally the importance of building a strong interface between social and computer science disciplines in the analysis of digital phenomena. A community evolution graph is a formal representation of the flows between different static communities forming evolving communities.

3	Bachelot, M., Lyubareva, I., Epalle, T., Billot, R., & Lasserri, R. D. (2024): « French fake news propagation: multi-level assessment and classification », Social Network Analysis and Mining, 14(1), 1-20.	The landscape of news consumption has significantly transformed due to online social media platforms, leading to a rapid increase in information dissemination with minimal quality control. Research on automated fake news detection has advanced, particularly through machine learning, resulting in the creation of notable datasets such as FakeNewsNet, Twitter15, and Twitter16. However, these methods have primarily focused on English Twitter data. To address this gap, we developed a French fake news dataset containing over one million tweets from 15 diverse events. We constructed Twitter propagation graphs for extensive statistical analysis and built tweet cascade propagation trees to explore various detection methods. Our multi-level analysis reveals distinct propagation patterns for fake news compared to true news at microscopic, mesoscopic, and macroscopic levels, confirming that fake news spreads more broadly and quickly, often involving less verified but strategically influential users. While simple machine learning models effectively classify true versus fake news, the study also highlights their lack of generalization for more nuanced definitions of fake news.
4	Bachelot M., Lyubareva I., Billot R., Epalle T., Lasserri R.-D. (2023) : « Fouille de données hétérogènes pour la caractérisation de fake news : analyse empirique », Workshop Infox sur Seine - SCAI (Sorbonne Centre for AI), Mercredi 22 mars 2023, Paris.	The majority of papers about fake news detection use well known referenced datasets, which are composed of English Data. Hence, there is a need to explore more accurately how Fake News behave in other languages, in order to further consolidate literacy results on Fake News Detection. This paper aims to identify valuable characteristics of French spurious information. We explore validity of previous results obtained in English literature on a original French Fake News Datasets. In addition to Twitter Data, media articles are considered in order to better capture the news ecosystem. The dataset is composed of more than 3500 articles from 136 news producers and 1 million tweets. The results show that propagation and semantic characteristics are different whether Twitter or media articles are considered. On Twitter, fake news spread faster with more diverse content whereas delays are always longer for Fake News articles, with more repetitive content.
5	Boudjani, N., Haralambous Y., Lyubareva I. (2020): « Toxic Comment Classification For French Online Comments », IEEE International Conference on Machine Learning and Applications (IEEE ICMLA)	In this paper, we propose a supervised approach for toxic comment classification for French language. We choose a set of features proposed for toxic comment detection for English and use it for French toxic comment detection. Our approach is based on N-gram features, linguistic features and a dictionary of insulting words and expressions. We obtain a F1-score of 78% with N-grams, linguistic and lexicon features, a precision of 87% with N-gram features and a recall of 83% with N-gram, linguistic and lexicon features. Classifier used are linear SVM and decision tree.

SCIENTIFIC PRODUCTION/PRODUCTION SCIENTIFIQUE[1]		
5 PUBLICATIONS/5 PUBLICATIONS[2]		WHAT IS THE MAJOR CONTRIBUTION OF THIS PUBLICATION /QUEL EST L'APPORT MAJEUR DE CETTE PUBLICATION ?
1	ANGELIKI MONNIER, AXEL BOURSIER, AND ANNABELLE SEOANE. <i>CYBERHATE IN THE CONTEXT OF MIGRATIONS</i>. SPRINGER INTERNATIONAL PUBLISHING, 2022b	Ce livre édité adopte une approche interdisciplinaire pour mettre en lumière les dynamiques complexes impliquées dans l'incidence des discours de haine en ligne contre les migrants dans des contextes générés par les utilisateurs. Les auteurs s'appuient sur des études de cas menées en Finlande, en France, en Allemagne, en Italie, en Pologne et au Royaume-Uni, et rassemblent des analyses qualitatives et quantitatives sur les commentaires en ligne générés par les utilisateurs. Les auteurs soutiennent que le discours de haine en ligne contre les migrants doit être compris comme un symptôme d'une crise de représentation sur la migration, qui ne peut être pleinement perçue que par l'étude des processus linguistiques, interactionnels et connectifs complexes au sein desquels il émerge.
2	ANGELIKI MONNIER ET AXEL BOURSIER, « LA STRUCTURE ACTANTIELLE DES DISCOURS DE HAINE DANS LES PLATEFORMES PARTICIPATIVES EN LIGNE », <i>CAHIERS DE NARRATOLOGIE</i> [EN LIGNE], 42 2022.	L'hypothèse de cet article méthodologique est que pour décrypter les discours de haine, il faut aller au-delà du niveau lexical voire au-delà de la phrase, pour s'intéresser au commentaire, en tant qu'unité complexe de sens. Notre contribution s'intéressera à un cas spécifique, celui des discours de haine contre les migrants. Nous montrons que les énonciateurs des propos haineux interviennent dans la construction narrative de deux façons : ils identifient des actants tiers et construisent ainsi un micro-récit de la haine ; ils assument directement un rôle actantiel au sein d'un dispositif scénographique spécifique.
3	AXEL BOURSIER, ASAL BAGHERI, <i>MIGRATIONS, LES DEFIS DE L'AUTRE</i>, HERMES LA REVUE, CNRS, NOV.2024	Ce numéro de revue entend comprendre la place de la communication dans la perception de la migration comme un problème public. Une section du numéro est consacrée à la façon dont la communication des partis altérophobes use des désordres informationnels pour cadrer la migration comme un enjeu sécuritaire.
4	ANNABELLE SEOANE, AXEL BOURSIER, "VISIBILISER, CRISTALLISER, DENONCER : LAMPEDUSA DANS LE FIGARO, UNE APPROCHE DISCURSIVE", IN ALEXANDER KONDRATOV, LAURA CALABRESSE (DIR.), <i>VISIBILITE ET INVISIBILITE DES MIGRANTS AU SEIN DES SOCIETES CONTEMPORAINES</i>, KAIROS, A PARAITRE.	Cet article interroge la représentation de la crise migratoire lors de l'événement que représente en septembre 2023, L'arrivée de 11000 migrants sur les côtes italiennes et la disparition de 2500 personnes en mer. Il interroge également la place des commentaires de lecteurs sur le site <i>lefigaro.fr</i> . Il entend comprendre la façon dont les commentateurs renforcent les stéréotypes sur la migration et participe à la crispation du discours sur la migration.

5	AXEL BOURSIER "#NOUSSAVONS: EN MISSION POUR DIRE LA VERITE." CANADIAN JOURNAL OF COMMUNICATION (2023).	En juillet 2021, en France, le mot-clic #NousSavons regroupe les sceptiques de la COVID-19 sur Twitter. Réel cluster, ce mot-clic positionne la mobilisation directement sur le plan du savoir. Cet article examine l'architecture du discours que composent les membres de la communauté #NousSavons. L'analyse prend en compte deux productions de cette communauté qui viennent soutenir une perception complotiste de la COVID-19 : la mise en place de gages de légitimité devant confirmer leur perception de la crise et la mise en visibilité de ces gages. Cet article montre la diversité des preuves mises en place par la communauté ainsi qu'un positionnement singulier eu égard à la vérité. Il analyse également le raffinement des pratiques communicationnelles mises en œuvre dans le but de convaincre les membres de l'espace public.

SCIENTIFIC PRODUCTION	
5 publications/5 publications ⁵⁰	What is the major contribution of this publication /Quel est l'apport majeur de cette publication ?
1 Pietrandrea P. & Battaglia, E. (2022) "Migrants and the EU". The diachronic construction of <i>ad hoc categories</i> in French far-right discourse <i>Journal of Pragmatics</i> Volume 192, April 2022, pp. 139-157	In this article, we examine the evolution of French far-right digital public discourse on migrants between 2012 and 2020 in the FR-R-MIGR-TWIT corpus and propose metrics to assess its impact on public discourse.
2 P. Pietrandrea (2021) <i>Comunicazione, dibattito pubblico, social media. Come orientarsi con la linguistica</i> . Roma, Carocci Editore	In this monograph, I employ the theoretical frameworks of philosophy of language, semiology, argumentation theory, critical discourse analysis, pragmatics, and linguistic semantics to demonstrate how linguistic education can contribute to enhancing the quality of digital public debate. This work is widely used as a textbook in university courses on pragmatics, ethics, and the linguistics of digital communication in Italy.
3 P. Pietrandrea (2018). Epistemicity at work. A corpus study on Italian dialogues. <i>Journal of Pragmatics</i> 128 171-191	This article presents the theoretical considerations underlying the decisions for the construction, annotation and analysis of the MoDAL corpus, a corpus of spontaneous French-English and Italian dialogues annotated in terms of epistemic modality. These theoretical choices served as a reference for three projects on the annotation of modality: WoPoss , coordinated by Francesca dell'Oro, (Lausanne), Posepi , coordinated by Jérôme Jacquin (Lausanne) and Infinita , coordinated by Johanna Miecznikowski (Lugano).
4 F. Masini, P. Pietrandrea (2010). <i>Magari</i> . <i>Cognitive Linguistics</i> 21-1 75-121	In this paper, we propose a constructional analysis of the relationship between the meaning of the Italian adverb <i>magari</i> and its distribution in discourse structures. In this work, we have theorised the existence of discourse-level topological constructions, namely lists, which constitute a regular distributional context for <i>magari</i> . This work has been extended by a number of projects on lists (in particular the UniversalList project at the University of Bologna), by the annotation of list structures in the French oral corpus Rhapsodie (Lacheret et al 2019), and by a general reflection on the place of lists in the syntax of languages, carried out in collaboration with my colleagues Francesca Masini and Caterina Mauri (Masini et al 2018).
5 P. Pietrandrea (2005). <i>Epistemic Modality. Functional Properties and the Italian System</i> [=Studies in Language Companion Series 74].	This monograph has helped to clarify the nature of the relationship between epistemic modality and evidentiality and has provided arguments for the recognition of the category of epistemic modality in literature independently of its morphological realisation.

SCIENTIFIC PRODUCTION	
5 publications/5 publications ⁵²	What is the major contribution of this publication /Quel est l'apport majeur de cette publication ?
1 John-Mathews, Jean-Marie, Cardon, Dominique & Balagué, Christine (2022) From Reality to World. A Critical Perspective on AI Fairness. <i>Journal of Business Ethics</i> 178, 945–959. https://doi.org/10.1007/s10551-022-05055-8	Fairness of Artificial Intelligence (AI) decisions has become a big challenge for governments, companies and societies. We offer a theoretical contribution to consider AI ethics outside of high-level and top-down approaches, based on the distinction between "reality" and "world" from Boltanski. To do so, we provide a new perspective on the debate on AI fairness and show that criticism of ML unfairness is "realist", in other words, grounded in an already instituted reality based on demographic categories produced by institutions. Second, we show that the limits of "realist" fairness corrections lead to the elaboration of "radical responses" to fairness, that is, responses that radically change the format of data. Third, we show that fairness correction is shifting to a "domination regime" that absorbs criticism, and we provide some theoretical and practical avenues for further development in AI ethics. Using an ad-hoc critical space stabilized by reality tests alongside the algorithm, we build a shared responsibility model which is compatible with the radical response to fairness issues. Finally, this paper shows the fundamental contribution of pragmatic sociology theories, insofar as they afford a social and political perspective on AI ethics by giving an active role to material actors such as database formats on ethical debates. In a context where data are increasingly numerous, granular and behavioral, it is essential to renew our conception of AI ethics on algorithms in order to establish new models of responsibility for companies that take into account changes in the computing paradigm.
2 Ahmad Haidar, Balagué Christine (2024): Generative AI: A Quantitative Study on Emerging Risks and Impacts, <i>R&D management conference</i> , Stockholm, Sweden, 17-19 June	This study examines the multifaceted risks associated with Generative AI (GAI) and their impacts on societal, organizational, environmental, and individual levels. Employing binary logistic regression analysis on data from the OECD AI Incidents Monitor, analyzing 858 GAI incidents, we explore the relationships between various dimensions of GAI risks and their potential impacts. Our study reveals critical insights: governance data issues significantly affect the four examined levels, with the most significant impact at the individual level, particularly regarding privacy and disinformation incidents. While broadly influencing various levels, content generation issues exert the most significant effects on individuals, organizations, and society, harming human trust, psychological well-being, reputation, national security, or social cohesion. Furthermore, social and environmental GAI incidents have a heightened impact on all the studied levels, including quality of life, organization innovation capacity, and economic stability. The study advocates future research to develop a dynamic framework for responsible GAI risk management.

3	Haidar Ahmad, Balagué Christine (2024). A Framework to Implement Responsible Digital Innovation: Dimensions, Best Practices and Challenges, <i>Journal of Innovation Economics & Management</i> , à paraître	Responsible Digital Innovation (RDI) presents a critical challenge for companies seeking to align digital innovation with sustainability goals and responsible managerial practices. This study develops a framework for RDI based on 18 qualitative interviews with companies. The first contribution of this study is to extend the literature on innovation management, digital innovation, and responsible innovation by linking these topics to build the RDI framework. The second contribution highlights five main dimensions of RDI: responsible digital innovation strategy, responsible by design digital innovation, organization challenges and KPI on RDI, digital responsibility toward end users, and catalysts. These five dimensions are split into twenty-five sub-dimensions illustrated by practices. By investigating the concept of RDI, this study contributes to the necessary shift from classical innovation management to sustainable innovation to address the dark issue of digital innovation. Therefore, we propose an RDI framework to channel digital innovation in a direction that fosters social wellbeing.
4	Balagué Christine (2021): <i>The challenge of responsible Artificial Intelligence</i> , in Artificial intelligence for sustainable value creation, Edward Elgar Publishing Inc, Massachusetts, USA. https://www.e-elgar.com/shop/gbp/artificial-intelligence-for-sustainable-value-creation-9781839104381.html	The dichotomic vision of artificial intelligence which emerged during the last years, underlines both the benefits of machine learning in innovation and the negative consequences of AI on organizations and more globally on society. After an historical contextualization of digital transformation, this article first provides an understanding of the potential negative impacts of AI, second presents the concept of ethics and its application to AI systems, third describes different initiatives to tackle the issue of negative consequences of AI. It also illustrates the theoretical aspects of ethics in AI by analyzing current technologies presented at CES 2020 in Las Vegas. Finally, the article provides guidelines for managers to address the issue of ethics in AI, including metrics for corporate social responsibility.
5	Balagué Christine, Fayon David (2022): <i>Pro en réseaux sociaux</i> , Editions Vuibert, Paris, ISBN : 978-2-311-62468-7	This book studies how social network works, explaining the role of algorithms, the economic model of digital platforms, the role of communities and influence, the environmental impact, and how to use social networks in a responsible way.

SCIENTIFIC PRODUCTION	
5 publications/5 publications ⁵⁴	What is the major contribution of this publication /Quel est l'apport majeur de cette publication ?
1 Marty, E., Ouakrat, A. & Pacouret, J., 2022, De Valeurs actuelles à VA+ : l'appropriation des formats et des logiques des réseaux socio-numériques par un média d'extrême droite. Quaderni, 107, 99-122. https://doi.org/10.4000/quaderni.2504	This work connects the ANR PIL project and the Algorithmic Society Chair of MIAI. It questions the embedding dynamics of media information within the algorithmic logics of socio-digital networks. Through the monographic study of the YouTube channel VA+, the aim was to objectify the construction of a digital strategy that reconciles proximity to the far right, preservation of journalistic credibility, and the pursuit of visibility on the internet. This work thus contributes to the reflection on how the algorithmic logic of engagement specific to the industrial rationality of social networks can foster the polarization of the online media landscape, and even affordances with reactionary or xenophobic ideologies. The interest of this work also lies in the diversity of methods employed (content analysis, ethnographic interviews) and in the interdisciplinarity of the approach (intersecting information and communication sciences with sociology and political science).

2	Marty E., 2019. « Contenus et discours des médias : concepts, méthodes, outils. », B. Lafon (dir.), Médias et médiatisation. Analyser les médias imprimés, audiovisuels, numériques. Presses Universitaires de Grenoble, p.79-103.	As a trainer in lexicometric methods since 2014, I have designed this chapter as a condensed overview of the epistemological, conceptual, and methodological elements necessary for those wishing to analyze media discourse using semi-automated tools. The aim was to formalize responses to the main questions frequently raised in the training sessions conducted with doctoral students and fellow teacher-researchers, with a didactic purpose. Additionally, contributing to the book "Media and Mediatization," coordinated by Benoit Lafon, was for me an opportunity, one year after joining GRESEC, to grasp the diversity of questions and approaches related to the concept of mediatization and to clarify my own positioning within my new host team.
3	Marty E., Pignard-Cheynel N., Sebbah B., 2016, Internet users' participation and news framing: The Strauss-Kahn case-related Live Blog at Le Monde.fr. New Media and Society, 1461444816650641, first published on June 16, 2016 as doi:10.1177/1461444816650641	The interest of this article is twofold. On one hand, it aimed to explore the modalities of journalistic oversight of user participation, with the live format being particularly interesting in this regard, as it exists in tension between renewing relationships with audiences and the industrialization of content flows. The challenge for me was also to work with colleagues who had already engaged with this corpus using more qualitative methods, in order to compare approaches and enrich the findings. Our shared ambition was to propose corpus analysis methods derived from French or Francophone research traditions to an international audience of researchers on new media (particularly those from Anglophone cultures), who are still relatively unaware of these approaches.
4	Marty E., 2015, « Les élections municipales au miroir de la presse quotidienne régionale. Des cadres médiatiques aux thématiques politiques », Mots. Les langages du politique, n°108, ENS Éd., p. 39-55.	In my opinion, this article has three contributions. First, it constitutes a personal contribution to advocating for an approach to analyzing political corpora through lexical co-occurrence, for which the journal Mots serves as an important space for transdisciplinary dialogue. Second, it aims to clarify and operationalize the sometimes nebulous concept of "media frame," a concept I have been working on since my doctoral thesis, in order to demonstrate its heuristic value and test methods for operationalizing the concept in the analysis of political events. Finally, local information is, for me, a prime area of research; however, while I have often examined local information through the lens of pure players or new entrants, this time it was about studying the historical and hegemonic actor that is the Regional Daily Press, in order to critically question its models of mediating the political issues.
5	Marty E., Rebillard F., Pouchot S., Lafouge T., 2012, Diversité et concentration de l'information en ligne. Une analyse à grande échelle des sites d'actualité français. Réseaux, n°176, p. 29-74.	This article is derived from my postdoctoral work within the ANR IPRI project. It aimed for comprehensiveness in analyzing the imbalances of the French online media agenda in the early 2010s, thus providing support for subsequent research, both French and Francophone, on online media. It first offers a categorization of online information actors and a definition of the notion of "journalistic subject." It then presents detailed measures of the diversity or, conversely, the concentration of online content around certain subjects, in relation to the proposed typology of actors. The challenge was to establish a foundation for the theoretical and operational definition of pluralism in online information for Information and Communication Sciences (ICS) and Social Sciences and Humanities (SSH).

Responsabilités scientifiques

2023-

Séminaire fermé ELICO " Enquête sur l'enquête : les gestes du chercheur, dimension praxéologique et dimension épistémologique »

J1. JE 23 novembre 2023 « Le chercheur face à son terrain : approche, outil, place de l'expérience et des émotions » .

J2. JE prévue mars 2025 « Le chercheur et ses données : du terrain à la restitution. Interroger la dimension collectionniste et la dimension esthétique de ses données ».

Co- responsabilités scientifiques

2024 -

Séminaire annuel ELICO : SEMIA, IA et approches critiques en Sic.

J1. 7 juin 2024 : IA et éthique avec Alberto Romele

J2. 29 novembre 2024 : IA et approches critiques en sic avec Fanny Georges

Engagements dans des manifestations scientifiques

- 2024 co-responsabilité et comité scientifique du colloque CIA4 « Fabuleux fabulistes : du projet utopique aux projets pratiques, entre tiers-lieux et lieux alternatifs », 26 et 27 septembre 2024, Bordeaux (définition des axes, évaluation des propositions, animation de sessions)
- 2023 co-présidence et co-responsabilité du comité scientifique colloque ISKO France « Epistémologie sociale dans l'organisation des connaissances », 19 et 20 octobre 2023, Lyon (définition des axes, évaluation des propositions, animation d'ateliers, suivi de la publication des Actes).
- 2022 comité scientifique du colloque CIA3 « Du prévu au vécu : Réagencement, accompagnement, réorganisation des dispositifs info-communicationnels face à l'imprévu », 17 et 18 novembre 2022, Bordeaux (évaluation des propositions, animation de sessions).
- 2017 comité d'organisation du colloque « Youtubeurs : figures, formats, savoirs, pouvoirs », 9 et 10 novembre, Tours (définition des axes, suivi de la publication des Actes)
- 2016 comité scientifique du colloque international francophone Eduquer au monde de demain « De la créativité à l'innovation dans les dispositifs et les pratiques, pédagogiques et professionnelles » organisé par l'ESPé de l'université Blaise Pascal de Clermont-Ferrand (définition des axes, évaluation des propositions, animation d'ateliers).

Activités d'évaluation ou expertise scientifique

2022-2024 Expertise scientifique pour l'EDTECH BeMyMedia pour le projet REEMI : renforcer l'employabilité par l'éducation aux médias et à l'information dans le cadre d'une réponse à l'appel PIC axe 3 de la Région Auvergne-Rhône-Alpes & Pôle emploi.

2023 Evaluation de contributions pour le numéro 8 de la revue *BALISAGES* « Désinformation hier et aujourd'hui. Une approche interdisciplinaire. Les acteurs ».

Coordination de numéro de revue

Etudes Digitales, 2019, n°7, Youtubeurs, Youtubeuses : inventions subjectives, coordination Gomez-Mejia (Gustavo), Nicey (Jérémie), Stalder (Angèle), p. 17-32.

Membres de trois ANR

- 2022-2024 : ANR Staps FabLabMore, Médiation, Optimisation, Redocumentarisation et Enjeux de savoirs dans les tiers-lieux Fablab, coordonné par Vincent Liquète
- 2018-2021 : ANR Jeune chercheur, VIJIE, Vérification de l'Information dans le Journalisme, sur Internet et dans l'Espace public coordonné par Jérémie Nicey, EPJT Tours.
- 2013-2016 : Translit, compréhension des problématiques spécifiques que pose la translittératie du point de vue de l'éditionnalisation de l'information, de la transmission des connaissances, de la co-construction des savoirs et de la participation à des activités numériques citoyennes et de la transférabilité des pratiques dans des contextes différenciés, coordonné par Divina Frau-Meig,

Membre du GERPI, Groupe d'Etudes et de Recherche sur les Pratiques Informationnelles de la SFSIC (Société française des Sciences de l'Information et de la Communication) depuis juin 2023.

J'ai pris part à 2 comités de sélection pour le recrutement de McF en SIC en tant que membre extérieure (Strasbourg en 2023, Tours en 2024).

1 Stalder, A. et Gomez-Mejia G. Verification Gestures by Twitter Users: Media Materials and Vernacular Investigations. à paraître dernier semestre 2024 dans la revue <i>In Media</i>	This article summarises a four-year research experiment (2018-2022) conducted as part of the ANR VIJIE project, exploring information verification practices. It focuses on the vernacular practices of Twitter users engaged in independent investigations and critical actions on the platform. Taking inspiration from digital ethnography, the authors provide insights into their methodology, which involved collecting diverse media materials related to "fake news" and fact-checking, emphasising the significance of private messages (DMs) in this project's aims. The article outlines three key dimensions for analysing these vernacular investigations —figures, events, and gestures— that reflect on the evolving landscape of information verification and fact-checking practices using socio-semiotic and documentary perspectives. This study and its thematic collections of screenshots and publications contribute to a deeper cultural understanding of verification gestures within digital spaces.

2	Chenevez, O. et Stalder, A (2021). « La formation de l'esprit critique : la zététique pour accompagner l'éducation aux médias » in Serres, A. Liquète, V. et Delamotte, E. (2021). Des cultures aux pratiques informationnelles. Montpellier : PUM, p.89-107.	Les cultures de l'information donnent une place importante aux démarches d'évaluation de l'information, ainsi qu'aux postures critiques raisonnées à l'égard des médias. Divers travaux scientifiques concernent la formation de l'esprit critique vis-à-vis des médias, qu'il s'agisse d'une approche épistémologique théorique pour définir la pensée critique et les habiletés qu'elle suppose ou de travaux didactiques à la recherche de réponses aux questions posées concrètement par la société aux systèmes éducatifs et aux enseignants. Ces questions se posent d'ailleurs de façon de plus en plus aiguë avec la conjonction de plusieurs facteurs : l'évolution des pratiques médiatiques numériques, un environnement informationnel mouvant et sujet à des désordres nombreux, la crise de confiance générale envers les institutions, les experts, les politiques et les médias, le succès des rumeurs complotistes, notamment chez les jeunes. De nouvelles pratiques pédagogiques ont vu le jour qui visent l'acquisition d'une posture critique, ainsi qu'une acculturation médiatique, informationnelle et numérique complexe. Parallèlement, et presque pour les mêmes raisons, les sciences de la nature ont eu à affronter une question très voisine : comment faire pour que les jeunes mobilisent une pensée scientifique face aux croyances en tous genres, notamment concernant les phénomènes dits paranormaux ? Dans ce contexte, notre intention est d'explorer une frontière des cultures de l'information à l'endroit même qui sépare, de façon assez étanche, les « sciences humaines — sciences de la culture » et les « sciences dures — sciences de la nature », selon l'expression du philosophe Heinrich Rickert. La frontière que nous explorons est celle qui a pour nom « formation de l'esprit critique », des deux côtés de cette frontière. Ainsi nous l'avons localisée dans le territoire de la zététique pour ce qui concerne les sciences de la nature. Pour les sciences de la culture, elle a une place dans l'Éducation aux Médias et à l'Information (EMI), notamment dans sa dimension d'éducation à la citoyenneté.
3	CORDIER, Anne, STALDER, Angèle. « Modes d'appropriation et de dissémination des cultures de l'information à l'École : Les conditions de la reliance », <i>Communication des organisations</i>, 2017, n°51, p. 67-76.	Dans cet article il s'agit de voir comment les pratiques sociales d'information questionnent les modes de formalisation des cultures de l'information en milieu scolaire, et les rôles de chacun et principes de gouvernance qui y sont en vigueur. C'est tout le rapport aux objets info-communicationnels au sein du système académique des savoirs qui est invité à être repensé dans et par l'organisation apprenante. Constituées de connaissances, de représentations et significations partagées acquises en divers lieux, ces cultures de l'information doivent pouvoir circuler et dialoguer entre elles. Mais pour cela elles doivent être explicites. Or bien souvent, les éléments de ces cultures sont implicites pour l'acteur qui les a acquises de façon individuelle. Les éprouver socialement permet de les conscientiser, de les ajuster et de les faire évoluer. En outre, nos observations des pratiques pédagogiques en information-documentation et notre approche longitudinale des pratiques informationnelles juvéniles témoignent d'un rapport pragmatique à l'information et au document développé dans le cadre scolaire, négligeant partiellement la dimension culturelle de l'information. Prenons pour exemple l'appréhension de la notion d'évaluation de l'information, dont l'apprentissage se fait, dès l'école primaire et jusqu'au lycée, par une grille appliquée de manière systématique mais non réflexive et sans transfert effectif, cantonnant la pratique de l'évaluation de l'information au cadre prescriptif académique, privée d'un sens social.

4	Gomez-Mejia G., Nicey, J. et STALDER, A. (2019). « Énon- ciation ». In <i>Études digitales</i> , 2019, n°7	Etude de la figure du youtubeur et de la youtubeuse dans un contexte de reconfiguration de l'espace public. La figure du youtubeur révèle une série de tensions expressives et indus- trielles. D'une part, l'énonciation subjective du youtubeur dépend du cadre des chaînes, des performances vidéo et des attentes des abonnés ; d'autre part, elle suit une spécialisation thématique au sein de paysages segmentés et stylisés, entre niches d'intérêts et circulations médiatiques. Ces axes balisent une approche compréhensive des mises en scène, mé- diations et identifications associées aux youtubeurs.

1	R.Epstein, <i>On est bien arrivés. Un tour de France des grands ensembles</i> , Paris : Le Nouvel Attila, 2022	This book, devoted to postcards of large-scale social housing projects, has been a great success with the general public, and has helped to popularize historical and sociological studies of these stigmatized neighborhoods.
2	R.Epstein, <i>La rénovation urbaine. Démolition-reconstruction de l'Etat</i> , Paris : Presses de Sciences Po, 2013	Devoted to the National urban renewal program initiated in 2003, this book theorizes the evolution of urban governance in terms of "remote government", a notion that has since been widely debated in French political science.
3	M.Guénot, R.Epstein, F.Jobard, « Emeutes urbaines, sciences sociales et action publique. Mouvements et stagnations dans la politique de la ville et les politiques de sécurité », <i>Zilsel : Science, technique, société</i> , 13(1), 2024	This article focuses on urban riots in French cities, analyzed from the point of view of the relationship between social science and public policy. It explains why the action of the police, although at the source of these riots, is never called into question afterwards.
4	L. Bereni, R. Epstein, M. Torres, « Colour-blind Diversity. How the Diversity Label Reshaped Anti-discrimination Policies in Three French Local Governments », <i>Ethnic and Racial Studies</i> , 43(11), 2020	This article examines the conditions under which a local anti-discrimination policy is possible in a color-blind context, and the instruments on which it can be based.
5	V.Béal, R.Epstein, G.Pinson, « Networked Cities and Steering States. Urban Policy Circulations and the Reshaping of State-Cities Relationships in France », <i>Environment and Planning C: Politics and Space</i> , 36(5), 2018	This article shows that the State's withdrawal from urban governance is accompanied by new modes of intervention, based on incentive instruments, which enable the central government to exert its influence.

SCIENTIFIC PRODUCTION/PRODUCTION SCIENTIFIQUE⁶⁵

5 publications/5 publications⁶⁶

What is the major contribution of this publication /Quel est l'apport
majeur de cette publication ?

1	The Court of Justice of the European Union and the Politics of Law (with Sabine Saurugger), Palgrave Macmillan, The European Union Series, 2017.	his book analyses the Court of Justice of the European Union within the European Union system. It puts the Court's role into perspective by combining law and politics. Far from evolving in a political vacuum, the CJEU is situated at the centre of a game of actors: it influences these actors as much as it is influenced by them. Three main contributions can be highlighted. Firstly, the book opens up the Court's black box to discuss its internal organisation from a variety of angles, including sociological ones. Secondly, it provides an analysis of the specific interactions that the Court has with each of the players in the European system (Council, Commission, Parliament, Member States, interest groups, etc.). Thirdly, it presents the Court's contribution to the constitutionalisation of EU law and, in a more original way, the way in which the Court contributes to the development and implementation of public policy. This is a key work, to which is linked a large number of my publications on the Court of Justice from a legal and political perspective (5 articles, 4 chapters, 18 papers, 2 invited lectures).
2	Torn between institutionalisation and judicialisation: the demise of the EU-US privacy shield (with Elaine Fahey), Indiana Journal of Global Legal Studies, 2021, 28, 205.	This article analyses the content and implementation of the Privacy Shield - an 'arrangement' allowing the transfer of data between Europe and the United States - from the point of view of EU law and through two main concepts: institutionalisation and judicialisation. It provides the conceptual tools for understanding the relationship between the EU and US legal orders, in an area where EU law is more protective than US law. The article shows that the degree of institutionalisation - defined as submission to stable rules, procedures and practices - is insufficient to prevent the Privacy Shield from being invalidated by the CJEU (understood as a form of 'negative judicialisation'). The remedies available to the US authorities remain inadequate, and the surveillance programmes remain disproportionate. This publication is the second in a series of three articles: it continues a reflection on Safe Harbour begun in an article published in European Papers and has been supplemented by a contribution to the Research Handbook on Transatlantic Relations taking into account the state of the law after the Schrems II ruling.
3	Soft Law in the European Union - The Changing Nature of EU Law – European Law Journal, 21(1), 2015, pp.68-96.	This is my most cited article. It is considered as a key article to understand the nature of soft law in the European Union. <i>This article is based on the assumption that there is a continuum running from non-legal positions to legally binding and judicially controlled commitments with, in between these two opposite types of norms, commitments that can be described as soft law. It aims at defining soft law in international relations in order to provide a mapping of EU law on the basis of the soft law / hard law divide. It helps categorize EU competences and public policies, and see how they fit with the distinction between two kinds of processes: legalization (transformation of non-legal norms into soft or hard law) and delegalization (transformation of hard law norms into soft law and evolution from hard to soft law).</i>

4	Soft and hard law in times of crisis: budget monitoring, migration and cybersecurity (with Sabine Saurugger), <i>West European Politics</i> , Vol.44, Issue 1, 2021, pp.21-48.	European integration is associated with the idea of an 'ever closer Union', achieved in part through 'integration-through-crisis'. However, while crises have led to higher regulatory pressure, responses to these crises have not always taken the form of stronger commitments and legally binding rules. Based on the study of three policy areas recently affected by crises, this article aims at analysing why in one of these policies (migration) more soft rules have been adopted, while the two other policies have evolved towards a greater use of hard law (budget monitoring, cybersecurity). Three potential explanations are analysed: the intensity of crises impacting political systems; the quality of prior norms and their (perceived) implementation; the entrepreneurship and heterogeneity of the coalition. Although all of these factors have explanatory powers, the capacity of policy entrepreneurs to build a large coalition appears to be the central explanation.
5	La relance du projet européen de défense au-delà du contrôle des Etats, <i>Politique européenne</i> , N°70, 2020, pp.40-69.	The aim of this article is to seek to understand the revival of the European defence project in the European defence project in the 2010s by mobilising several theoretical approaches. While the new intergovernmentalism seems a priori to be the most appropriate approach, given the importance attached to the States in a context of crisis, empirical analysis shows its limitations. The neo-functionalism and neo-institutionalism make it possible to understand why, in an area that was thought to have been left to the Member States and to intergovernmental deliberation, supranational actors and mechanisms have succeeded in influencing the integration process.

7.2. 3-year action plan

WP0 – Key actions and deliverables at a 3-year horizon

Project management. Key Actions (led by U Lille): recruitment of DemoCIS management team, coordination of the agreements required to launch the project and the consortium agreement, operational management of the project, i.e. i) installation of the scientific animation of the project, ii) deployment of the project's actions and budget – Communication, Research, Support for public policies, DemoCIS Platform & science-society link, Technological development, Data management, Development of the national and international DemoCIS network -, iii) coordination of the support resources provided by each institution (monitoring of publications, setting up of European projects, support for the Science-Society link, support for public policies and transfer), iv) financial and administrative management and monitoring, v) setting up of DemoCIS tools and evaluation process, reporting (governance and ANR), preparation of DemoCIS mid-term evaluation, vi) liaison with governance bodies to submit proposals and obtain decisions.

Deliverables: Finalized ANR agreement, consortium agreement and repayment agreements between DemoCIS partners; Annual monitoring report of DemoCIS actions implementation and performance indicators; Preparation of DemoCIS mid-term evaluation.

Partners and stakeholders involved: all other DemoCIS partners as contributors.

Organisation of DemoCIS governance:

Key Actions (led by U Lille): installation of the project governance (Steering Committee, Scientific Board, Consultative Steering Committee), organization of the governance meetings, follow-up and support for the implementation of the governance decisions and recommendations.

Deliverables: Regular Meetings of the governance bodies and associated reports.

Partners and stakeholders involved: all other DemoCIS partners as contributors, of international academics and representatives of public institutions, associations and civil society as part of the Consultative Steering Committee.

Resources mobilized for WP0: Project Manager (1), Communication expenses, Expenses related to the organization of governance and advisory body meetings, Discharges.

WP1 – Key actions and deliverables at a 3-year horizon

International Observatory of Democratic Practices - Deliberative democracy in crisis contexts. Key actions (led by U Lille): identification of partners and establishment of a network of national and international players, production of initial case studies and analytical work on decision-making processes applied to specific contexts (COVID), analysis of all data collected in year 2. Deliverables: symposium at the end of the first year, bringing together international and institutional partners, surveys of identified cases, organization of regular seminars bringing together network partners. Scientific publications and dissemination within and outside the academic world. Partners and stakeholders involved: U Lyon 3, CYU/IEP St Germain en Laye, Cambridge Stanford, Amsterdam and Montréal Universities, French local, national and European public players (parliamentarians, local elected representatives, etc.).

International Observatory on Democratic Practices - Ethics in Public Life. Key actions (led by U Lyon 3): identification of partners and establishment of a network of national and international players, launch of initial work to evaluate the systems, use of data collected in year 2, dissemination of analyses. Deliverables: symposium at the end of the first year, bringing together international and institutional partners, mapping of systems implemented by players in public life, guides and training in good governance practices. Partners and stakeholders involved: U Lille, CYU/IEP St Germain en Laye, Cambridge Stanford, Amsterdam and Montréal Universities, Observatoire de l'éthique publique, Observatoire SMACL des risques de la vie territoriale, associations (Transparency, Anticor) and institutions (HATVP, Commission des comptes de campagne, Agence Française anti-corruption).

International Observatory on Democratic Practices - Part on practices involving citizens in public decision-making. Key actions (led by CYU/IEP St Germain en Laye): identification of partners and establishment of a network of national and international players, launch of initial work to evaluate the systems, use of data collected in year 2, dissemination of analyses. Deliverables: Colloquium at the end of the first year, bringing together international and institutional partners, National mapping of institutional mechanisms for democratic inclusion, Simulation scenarios will be produced based on case studies to put citizens, practitioners and decision-makers in a situation of experimentation (serious-democratic-games...) at different scales and in national, European and international contexts. Training for elected representatives, school groups, teachers and students), development of educational tools, exhibition kits, workshops. Partners and stakeholders involved: U Lille, U Lyon 3, Cambridge Stanford, Amsterdam and Montréal universities, rectorats, "Parlons démocratie" association.

Democracy Barometer - Political Offer and Citizen Confidence. Key actions (Steering UGA): Development of the first tools for measuring citizen distrust, both quantitative and qualitative and multiscale (national with local variations made possible by the project), Launch of the first quantitative and qualitative surveys (2026/2027 electoral sequence), Development of the first tools for measuring citizen distrust, both quantitative and qualitative and multiscale (national with local variations made possible by the project), Launch of the first quantitative and qualitative surveys (2026/2027 electoral sequence), Development of the first tools for measuring citizen distrust, both quantitative and qualitative and multiscale (national with local variations made possible by the project). Deliverables: Regular seminars bringing together partners to create the instrument, first general assembly of the Democracy Barometer, study report and 1st edition. Partners and stakeholders involved: Partner teams will be mobilized across the consortium to cover the entire territory on localized studies. Mobilization of International Social Survey Programme (ISSP), a private partner like Cluster 17.

Citizens' Convention for Democracy: deployment of the first "Institutional Reforms and Democratic Innovations" edition. Key actions: see WP5. Partners and stakeholders mobilized: All project partners.

Resources mobilized for WP1: Grants for theses, post-docs and/or study engineers, operating expenses, mission expenses.

WP2 – Key actions and deliverables at a 3-year horizon

Democracy barometer - Ordinary conceptions of democracy. Key actions (led by IEP Grenoble): design of quantitative (panel) and qualitative (individual interviews and focus groups) survey systems, dormalization of barometric measurements, data visualization techniques and contents/supports/channels of valorization, international training action - quality indicators of democracy, international meetings - democratic vulnerabilities and non-recourse to the law. Deliverables: Quali-quantitative study report no. 1; Data submission wave 1; International meetings on political trust and democracy; International meetings on market and democracy, Quali-quantitative study report no. 2; Data submission wave 2; launch of valo actions (website, podcasts and social media workshops); Quali-quantitative study report no. 3; Data submission wave 3; general assembly of the Democracy Barometer (1st edition); proceedings of the conferences/meetings held in years 1 and 3. Partners and stakeholders involved: UGA, U Lille, U Lyon3, Odenore-UGA, GIS Démocratie et Participation, IR*Progedo, IR*Humanum, INRIA-AVIZ (participation in the development of the system), U Paris 8, (international meetings).

Cross-fertilization of knowledge on democratic inclusion. Key actions (led by U Lille): review of literature and practices, meetings with partners, organization of a colloquium, launch of a co-tutored comparative thesis (U Montréal), cross-knowledge research on poverty/exclusion; meetings with associations on other dimensions, social network workshops, ethnographic survey of working-class areas, use of data collected in year 2, drafting and dissemination of results. Deliverables: Inaugural colloquium on ordinary citizenship on the margins ; Post-doctoral survey and organization of research seminars on the challenges of activist archives; Methodological guide on democratic inclusion; Publications on the results of the cross-fertilization of academic, experiential and professional knowledge. Partners and stakeholders involved: ATD Quart Monde, FCSF, ICPC, Odenore, U Avignon, U Montréal.

International Observatory of Democratic Practices - Past Citizen Initiatives. Key actions (led by U Lille): launch of an international doctoral network, survey of archives and sources, art projects in health care institutions, translation of archives, online dissemination of results (database, podcasts and videos). Deliverables: Colloquium involving institutions/archives that have documented past citizen initiatives through digital humanities projects; Participatory research with New Sponsors; Scientific databases and publications. Partners and stakeholders involved: Penn State University, Johns Hopkins University, GIS Archives et Démocratie, Archives nationales du monde du travail, Université Libre de Bruxelles and Georgetown University.

Cultural Democracy. Key actions (led by U Lille): publication of a book in the PUS "Transition" collection; meetings with Nouveaux Commanditaires, field survey, interviews with artists, production of a documentary. Deliverables: *Colloquium* involving various cultural players (researchers, artists, institutions) on the New Sponsors and new forms of co-creation; Assises de la Démocratie en Santé en Hauts-de-France; Research-creation and action to create new online spaces of artistic expression for protest art. Partners and stakeholders involved: U Avignon, Société des nouveaux commanditaires, Ministère de la Culture.

Démocratie sanitaire. Key actions (led by U Lyon 3): identification of partners and setting up of regional network, international and interdisciplinary symposium "Place du patient dans le système de santé", publications resulting from international symposium and three Assises de la démocratie sanitaire. Deliverables: Assises de la démocratie en santé en Auvergne-Rhône-Alpes ; Assises de la démocratie en santé en Ile-de-France. Partners and stakeholders mobilized: France Assos Santé Auvergne-Rhône-Alpes.

Resources mobilized for WP2: Post-doc, doctoral contracts, event funding (symposium, conferences, meetings)

WP3 – Key actions and deliverables at a 3-year horizon

Dynamic cartography of changes in the information ecosystem. Key Actions (led by IMT): build a corpus of content representing the characteristics of information disorders, access to data from digital platforms via Article 40 of the DSA, access to unpublished databases from stakeholders in the present program, documentary analysis, qualitative surveys, creation of a user panel, analyze ecosystem transformations using dynamic network models and qualitatively and quantitatively the links and their orientation between ecosystem components, enhance the initial prototype to integrate massive data and develop a dynamic cartography. Deliverables: Initial analysis of a corpus of content; Quantitative and qualitative analysis of data from a variety of sources; Identification of the relevant components of the ecosystem; Cartography of ecosystem components and their interconnections; Dynamic cartography. Partners and stakeholders involved: CYU/IEP St Germain en Laye, U Lille, Accelerator of Princeton University, News media, local players, Media Pluralism Monitor representatives.

Analytical Models of critical ecosystem components. Key Actions (led by IMT): dynamic network modeling using Social Network Analysis (SNA) techniques and time series to detect interconnections and components critical to ecosystem resilience, content analysis and data mining to extract hidden patterns and trends in large datasets to identify risks and anomalies, using tools such as machine learning and decision trees, interactive dashboards for managing and analyzing risk indicators, qualitative surveys to collect and analyze data from information users, in order to assess the impact of identified risks, use of machine learning algorithms for proactive risk detection and ecosystem vulnerability identification, prototype of systemic risks and developing indicators and tools for monitoring. Deliverables: Specific and measurable indicators for each ecosystem component; Analytical models of critical ecosystem components and their interactions likely to generate systemic risks, detection of areas of dysfunction in the ecosystem; Initial assumptions for prototyping the systemic risks and developing indicators and tools for monitoring. Partners and stakeholders involved: UGA, U Lyon 3, CYU/IEP St Germain en Laye, Inria.

Framework Program for Evaluation and Intervention of Countermeasures. Key actions (led by ULille): participant observation in editorial offices and schools, laboratory and field experiments, participatory research, documentary analysis, ethnographic surveys, semi-structured interviews and empirical studies, workshop involving stakeholders and international partners, with a view to responding to a call to set up a European-level study and intervention center, finalization of the Fresque de la désinformation

Deliverables: First global recognition of existing technological, legal, professional, cultural and educational countermeasures, and definition of effectiveness indicators; First report evaluating the effectiveness of countermeasures, presented at the center's inaugural conference; Experimentation and participant observation in editorial offices and schools; Production of the first version of recommendations on education (good professional practice, legal and technological solutions); Publication of an expert's vademecum; Launch of a university training experiment for trainers, Fresque de la désinformation. Partners and stakeholders involved: U Lyon3, IMT, CYU/IEP St Germain en Laye, Giscel.

Resources mobilized for WP3: Post-docs, doctoral contracts, workshops funding, external expenses (ex. Use of MIT servers), costs for access to data and building databases.

DemoCIS

WP4 – Key actions and deliverables at a 3-year horizon

Sociological and historical analyses of radicalization processes and political violence.

Key Actions (led by CYU/IEP Saint-Germain-en-Laye): Updating of the Vioramil database for the period 2018-2024, Collection of individual files of 450 RAD detainees (radicalized common law detainees) in Quartiers d'évaluation de la radicalisation. **Deliverables:** State of knowledge on the processes of political violence, international colloquium on European jihadists, international publications and collective work on the historicization of violent radicalization practices based on the example of the defenders of French Algeria (1950s-1970s); work on the forms and challenges of the jihadist threat, involving academics and executives from the intelligence services (UCLAT-DGSI). **Partners and stakeholders involved:** Ministry of Justice and academic partners (UDM, ULB).

International research network on radicalization and political violence. **Key Actions (led by CYU/IEP Saint-Germain-en-Laye):** identification of partners and establishment of a network of national and international players, network management. **Deliverables:** Inaugural international colloquium; International colloquium on high-risk activism. **Partners and stakeholders involved:** UGA, GIS Démocratie et Participation, U Lyon 3 U Lille and international partners.

Inventory of the measures in place to combat hybrid attacks on democracies: national organizations and international cooperation. **Key Actions (led by CYU/Sciences Po Saint-Germain-en-Laye):** mobilization of state services and agencies in charge of combating foreign digital interference and defending digital infrastructures: survey protocol and field access authorizations, comparative surveys on the FAST network (France, Germany, UK and Canada), Viginum survey (interviews, analysis of protocols and algorithms), survey on ENISA and European procedures. **Deliverables:** Survey protocol and field access authorizations, research report on Viginum and its practices, and on the fight against cybersecurity at European level through the study of ENISA and its procedures, research report on the FAST network and special issue on hybrid / cyber threats in a major international journal.

Partners and stakeholders involved: UGA.

International Observatory of Democratic Practices - New conflictualities and public regulations. **Key Actions (led by ULille):** exploitation of databases and mapping of restrictions on fundamental freedoms of political participation in Europe, state of the art and benchmark, survey on the relationship of elected representatives to new democratic conflictualities and identification of partner communities, European comparative survey on mechanisms for restricting activism (focus on civil disobedience and environmental movements in Europe, on association dissolutions worldwide, launch of action-research: local regulation of conflictualities. **Deliverables:** Launch of an international network on the rule of law and public freedoms; Colloquium on "militant democracy"; Mapping/database of restrictions on public freedoms in Europe; Publication of a reference work in English on associative freedoms in Europe; Training cycle for European associative leaders on the protection of freedoms; International and interdisciplinary meetings on democracy and the rule of law; International colloquium on "Riots in working-class neighborhoods: diachronic and comparative perspectives". **Partners and stakeholders involved:** CYU/IEP Saint Germain en Laye, U Lyon 3, UGA, UDM, GIS D&P Observatoire des libertés associatives, IEP Grenoble, Université de Montréal, Association Ville et Banlieue, partners of the European civic network, CEDH, World forum, Observatoire des libertés associatives, collectivités territoriales, Ministère de l'intérieur, Observatoire du crime et de la justice, police unions.

Citizens' Convention for Democracy: contacts made with the cabinet minister, the DGNP and police unions, with a view to obtaining their support for the approach to organize the second on edition on "Police-population relations". **Key actions:** see WP5. **Partners and stakeholders mobilized:** All project partners.

Resources mobilized for WP1: Grants for theses, post-docs and/or study engineers, operating expenses, mission expenses.

WP5 – Key actions and deliverables at a 3-year horizon

Installation of functional work teams for each action, in conjunction with the Management Team.

Action 1 - Support for public policies. Key actions (led by U Lille): methodological preparation, drafting of a Methodological guide for inclusive citizens' conventions and the development of an inclusive digital tool enabling the use of the hybrid format, organization of the 2 first editions of the citizens' convention, coordination of the promotion and dissemination of DemoCIS expertise, setting up of guidelines for the production and dissemination of policy briefs, policy papers, white papers, etc. Deliverables: Methodological Guide for inclusive citizens' conventions. 2 first editions of the Citizens' Conventions, guidelines for the production and dissemination of policy briefs, policy papers, white papers. Partners and stakeholders involved: U Lille, CYU/IEP Saint Germain en Laye and all other DemoCIS partners as contributors.

Action 2 - DemoCIS Platform & science-society link. Key actions (led by U Lille): creation of DemoCIS living platform for democracy, dissemination of the project's various outputs, deployment of a DemoCIS education program. Deliverables: Operational DemoCIS living platform, DemoCIS education program and first period major dissemination actions. Partners and stakeholders involved: all other DemoCIS partners as contributors.

Action 3- Technological development. Key actions (led by Inria and U Lille): coordination of responses to the technological development and support needs (e.g. production of the Democracy Barometer, the platform for monitoring threats and flaws linked to the spread of informational disorders) and the **creation of cross-functional tools** (DemoCIS platform, inclusive digital tool for the Citizens' Convention). Deliverables: Production of the Democracy Barometer, of the platform for monitoring threats and vulnerabilities linked to the spread of informational disorder and other technological development. Partners and stakeholders involved: all other DemoCIS partners as contributors.

Action 4 - Data management. Key actions (led by CNRS and U Lille): creation of a data management plan and implementation of it in line with FAIR principles and support to DemoCIS needs in terms of data treatment. Deliverables: Data management plan. Partners and stakeholders involved: all other DemoCIS partners as contributors.

Action 5 - Development of the national and international DemoCIS network. Key actions (led by CNRS and U Lille): coordination the organization of recurring trips to stakeholders and key scientific events (DecmoCIS Symposium), and the structuring and extension of the DemoCIS network, drawing on the many national stakeholders (Universities of Nantes, Paris 8, Limoges, Avignon, GIS Démocratie et participation, Maisons des Sciences de l'Homme et de la Société) and international stakeholders in the project, as well as CNRS units and networks abroad. Deliverables: First symposium, at least 3 international networks set. Partners and stakeholders involved: all other DemoCIS partners as contributors and international academic stakeholders.

Resources mobilized for WP5: Personnel for convention organization, Costs for continuing education programs development, Personnel to feed the DemoCIS platform, Development of digital resources, videos..., Personnel for Technology development, Personnel for data management, other data management costs, Networks implantation costs, symposium organization costs.

7.3. Outstanding publications and previous initiatives

The DemoCIS consortium can boast of a significant publication dynamic with high international visibility, including a presence in the best journals in the disciplines involved and reference books, as shown by this selection:

1. **Abrial, S., Alexandre, C., Bedock, C., et al. (2022). Control or participate? The Yellow Vests' democratic aspirations through mixed methods analysis. *French Politics*, 20, 479–503. <https://doi.org/10.1057/s41253-022-00185-x> (Science Po Grenoble UGA)**
This article analyzes, through the combination of quali-quantitative survey data, the attitudes of French Gilets jaunes towards democracy and democratic innovations and demonstrates the existence of two discourses: one centered on the control of political elites, the other in favor of direct participation by ordinary citizens.

2. **John-Mathews J.-M., Cardon D. & Balagué C. (2022). From Reality to World. A Critical Perspective on AI Fairness. *Journal of Business Ethics* 178, 945–959. <https://doi.org/10.1007/s10551-022-05055-8> (IMT)**
The fairness of artificial intelligence (AI) decisions has become a major challenge for governments, businesses and societies. In a context where data is increasingly numerous, granular and behavioral, this article proposes to renew our conception of AI ethics on algorithms in the fields of health and safety.

3. **Basilien-Gainche, M. L. (2021). Limits at the limes: Diffracted sovereignty inside the border zones. *Political Anthropological Research on International Social Sciences (PARISS)*, 2(2), 205-235. <https://doi.org/10.1163/25903276-bja10026> (Université Lyon 3)**
This article examines the ethical requirements sovereignty entail, considering the exigencies of liberal democracy. It questions state sovereignty at borders, by referencing the contradictions that a border control approach based upon security concerns creates, and the distortions between societies of norms and situations of exception that the European migration and asylum policies generate.

4. **Basilien-Gainche M.L. (2022), The French Management of COVID-19. Normalisation of Regimes of Exception and Degradation of the Rule of Law, *Routledge Handbook of Law and the COVID-19 Pandemic*, Abingdon: Routledge (Université Lyon 3)**
A major contribution to the study of the impact of states of emergency (in this case health-related) on the functioning of democracies, the weakening of the rule of law, through the gradual introduction into the common law of measures initially intended as temporary and its repercussions on citizens' trust.

5. **Bereni, L., Epstein, R., & Torres, M. (2020). Colour-blind diversity: How the “Diversity Label” reshaped anti-discrimination policies in three French local governments. *Ethnic and Racial Studies*, 43(11), 1942–1960. <https://doi.org/10.1080/01419870.2020.1738523> (CY Université)**
This article examines the conditions under which a local anti-discrimination policy is possible in a color-blind context, and the instruments on which it can be based.

6. **Bernini, J. (2023). *Plaise au peuple: Pratiques et lieux de la décision démocratique en Ionie et en Carie hellénistiques*. Ausaunius.** (Université de Lille)
This book takes a fresh look at Hellenistic democracies from a spatial perspective. It highlights the different ways in which citizens participated in the democratic life of their city, through the use and appropriation of different places, both private and public.

7. **Blavier, P., Haute, T., & Penissat, É. (2020). Du vote professionnel à la grève: Les inégalités de participation en entreprise. *Revue française de science politique*, 70(3), 443-467.** <https://doi.org/10.3917/rfsp.703.0443> (Université de Lille)
This article studies the articulations and determinants of different the practices of employees with regard to internal corporate affairs and collective bargaining, ranging from workplace elections to strikes.

8. **Carrel Marion, 2023, « Discreet Mobilizations Against Discrimination. Informal Participation in French Deprived Neighborhoods », *International Journal of Politics, Culture and Society*, n°36, p. 17–33** (Université de Lille)
While disadvantaged neighbourhoods are often considered to be 'political deserts', discrete mobilisations of young people rooted in everyday practices are taking place. In small groups of individuals, they develop a mixture of sociability, mutual aid to 'get by' and awareness of social and racial inequalities. Observing this type of informal participation gives us an insight into the repertoires of protest of the powerless. The ethnography of the Zonzon 93 association, in Villepinte, Seine-Saint-Denis, contributes to our understanding of informal participation in a French context that puts the brakes on the process of politicising discrimination.

9. **Girard, C. (2019). *Délibérer entre égaux: Enquête sur l'idéal démocratique*. Vrin.** (Université Lyon 3)
This philosophical investigation questions the relevance of the democratic ideal for complex societies, endowed with representative institutions and subject to mass communication. It shows under what conditions this ideal can guide criticism and action today. Citizens can still aspire to govern themselves, and thus to deliberate as equals.

10. **Epstein, R., Guenot, M., & Jobard, F. (2023). Émeutes urbaines, sciences sociales et action publique: Mouvements et stagnations dans la politique de la ville et les politiques de sécurité. *Zilsel*, 13(2), 11-22.** <https://doi.org/10.3917/zil.013.0011> (CY Université)
This article focuses on urban riots in French cities, analyzed from the point of view of the relationship between social science and public policy. It explains why the action of the police, although at the source of these riots, is never called into question afterwards.

11. **Gonthier, F., & Guerra, T. (2022). From the people, like the people, or for the people? Candidate appraisal among the French Yellow Vests. *Political Psychology*, 43(4), 969-989.** <https://doi.org/10.1111/pops.12826> (Science Po Grenoble- Université Grenoble Alpes)
This article analyzes, through the combination of quali-quantitative survey data, the attitudes of French Gilets jaunes towards democracy and democratic innovations and

demonstrates the existence of two discourses: one centered on the control of political elites, the other in favor of direct participation by ordinary citizens.

12. **Gonthier, F. (2023). Partisans like any other? How populist supporters assess the economy when their party is in office. *European Political Science Review*, 15(4), 659-670.** <https://doi.org/10.1017/S1755773923000206> (Université Grenoble Alpes)
Populist supporters have been found to take cues from populist incumbents. Yet, little is known about how they incorporate party cues in their political beliefs when populists are in office. This paper argues that citizens who identify with populist parties engage in partisan motivated reasoning more intensely than their non-populist counterparts because populist party cues strongly prompt them to process biased information. Results highlight a mechanism by which populist incumbents are likely to remain attractive despite their poor economic record. They have implications for our understanding of the mainstreaming of populist parties in Europe.

13. **Gourgues, G., Mazeaud, A., Nez, H., Sainty, J., & Talpin, J. (2021). Les Français veulent-ils plus de démocratie ? Analyse qualitative du rapport des citoyens à la politique. *Sociologie*, 12(1), 1-19.** (Université de Lille)
By reproducing part of the survey system developed by J. Hibbing et E. Theiss-Morse dans *Stealth Democracy* (2002), this article shows that citizens' perceptions of democracy are highly dependent on social class, level of involvement and political orientation.

14. **Haute T., Neihouser M., Kelbel C., Soubiran T., Bué N., Desage F., Baloge M., Briatte F., von Nostitz F.-C., Sandri G., Talpin J. (2023), « Variables lourdes » et effets de voisinage. Retours sur une enquête à la sortie des urnes à Roubaix, *Revue française de science politique*, 73 (2), 195-225** (Université de Lille)
This article mobilizes a particular method for analyzing electoral choices: a representative exit poll conducted during the 2022 presidential election in the city of Roubaix, an area that is both popular and unequal. The survey covered 35 of the city's 45 polling stations (4,266 questionnaires). The article first explains that it is possible to contain the biases associated with exit polls. It goes on to show how this approach enables a detailed study of the social determinants of voting in working-class areas. Finally, it shows that the localized nature of the system makes it possible to document the existence of neighborhood effects in ways other than through aggregated data.

15. **Lyubareva, I., & Nocetti, J. (2024). La diplomatie numérique: Évolution des stratégies diplomatiques et d'influence à l'ère (du) numérique. *Réseaux*, 245(3), 11-35.** <https://doi.org/10.3917/res.245.0011> (Institut Mines Télécom)
This paper contributes to the understanding of digital diplomacy as a flexible and under-explored field that bridges multiple disciplines, particularly emphasizing its evolution from e-diplomacy to tech-diplomacy. It notes that this area is notably underexamined in French research compared to Anglo-Saxon academia. By examining this shift, the paper highlights the increasing complexity of diplomacy in a globalized digital landscape and the critical role of technological expertise in contemporary diplomatic strategies. Additionally, it offers a fresh perspective on the significant transformations in influence strategies amidst rising political authoritarianism and conflict, demonstrating how the challenges of

digital diplomacy and political influence are increasingly shaped by exponential privatization. This article opens a special issue on the theme of digital diplomacy under I. Lyubareva coordination.

16. **Marty, E., Ouakrat, A., & Pacouret, J. (2022). De Valeurs actuelles à VA+ : L'appropriation des formats et des logiques des réseaux socio-numériques par un média d'extrême droite. Quaderni, 107, 99-122.** <https://doi.org/10.4000/quaderni.2504> (Université Grenoble Alpes)

This work connects the ANR PIL project and the Algorithmic Society Chair of MIAI. It questions the embedding dynamics of media information within the algorithmic logics of socio-digital networks. Through the monographic study of the YouTube channel VA+, the aim was to objectify the construction of a digital strategy that reconciles proximity to the far right, preservation of journalistic credibility, and the pursuit of visibility on the internet. This work thus contributes to the reflection on how the algorithmic logic of engagement specific to the industrial rationality of social networks can foster the polarization of the online media landscape, and even affordances with reactionary or xenophobic ideologies. The interest of this work also lies in the diversity of methods employed (content analysis, ethnographic interviews) and in the interdisciplinarity of the approach (intersecting information and communication sciences with sociology and political science).

17. **Purenne, A., Carrel, M., Kaya, S., & Talpin, J. (2022). Converting ordinary resistance into collective action: Visibility struggles, discreet antiracist mobilisations and intermediation work in the French banlieues. European Journal of Cultural and Political Sociology, 10(1), 41–67.** <https://doi.org/10.1080/23254823.2022.2153712> (Université de Lille)

Winner of the European Sociological Association's "Best Article Award 2021-2024", this article looks at the levers for converting ordinary, discreet and informal citizen resistance into structured collective action in working-class neighborhoods.

18. **Rousset, G. (2023). La participation des représentants des patients aux instances décisionnelles en santé : Participation effective ou alibi démocratique ? In A. Dubuis & B. Lapérou-Schneider (Eds.), La société civile et la protection juridique de l'environnement et de la santé (p. 123). Mare & Martin. (Université Lyon 3)**

This research provides a sharp and original analysis of the conditions under which healthcare democracy can be effective, beyond the normative proclamations.

19. **Talpin, J., Balazard, H., Carrel, M., Hadj Belgacem, S., Kaya, S., Purenne, A., & Roux, G. (2021). L'épreuve de la discrimination : Enquête dans les quartiers populaires (p. 420). (Université de Lille)**

Based on a ground-breaking empirical survey of six working-class neighbourhoods in France and three in North America, conducted by a team of sociologists and political scientists, this book shows the consequences of the denial of recognition that surrounds discrimination: depression, exile, withdrawal.

20. **von Nostitz, F.-C., Neihouser, M., Sandri, G., & Haute, T. (2024). Individual attitudes towards internet voting: The case of France. JeDEM - EJournal of EDemocracy and Open Government, 16(3).** <https://doi.org/10.29379/jedem.v16i1.889> (Université de Lille)

Since the early 2000s, internet voting has developed considerably. However, limited research still examines citizens' expectations regarding its use in the electoral process, particularly in countries that have not yet introduced internet voting. This article addresses this gap by studying citizens' opinions about internet voting. We challenge existing preconceptions about their propensity to accept such a voting option.

2-b) Other notable actions

The consortium has **other initiatives that show its strong involvement in science-society dialogue and public policy support:**

1. **“Croiser les savoirs avec tou.te.s” collaborative space** (GIS Démocratie et participation and Université de Lille) Winner of the Prix de la Recherche Participative INRAE 2023, and the fruit of an agreement between the CNRS, the Cnam and ATD Fourth World, this collaborative space brings together knowledge from poverty, the social professions and scientific research on the methodologies and ethics of participatory research.
2. **White Paper by L'Observatoire de l'Ethique Publique and the Chair in Public Contract Law** (University of Lyon 3). The Université Jean Moulin Lyon 3 has drafted here a bill whose aim was to initiate a public debate on this issue, in order to enable political leaders to take note of the state of thinking and expectations of civil society in this area.
3. **TruEDem - Trust in European Democracies - Improving trust in European democratic institutions** (IEP Grenoble). The aim of this project is to draw up an overview of the main factors explaining political trust in several European countries TRUEDEM develops a comprehensive and transparent toolbox of short- and long-term policy interventions, including recommendations and methodologies for increasing trust in political institutions.
4. **Odenore or Observatoire des non-recours aux droits et services** (UGA). The aim of this research facility is to analyze and disseminate knowledge on the issue of non-recourse in the fields of social benefits, health, social and professional integration, the fight against discrimination.
5. **Coordination of the “open letter” - Institut Mines-Télécom researchers' response to the ARCOM consultation on opening up platform data” (ITM)** This initiative embodies the collective stance of influential researchers on a major issue of digital regulation, underlining the importance of data access in a context where platform transparency is crucial.
6. **Observatoire scientifique de la science et du crime** (CY/IEP St Germain en Laye). This observatory, which focuses on a central issue for contemporary democracies, provides serialized data, methodological precautions for interpreting data on trends in delinquency and insecurity, and an analysis of the causes and consequences of crime.
7. **La grande enquête – L'Esprit sorcier TV**, collaboration developed as part of the University of Lille's SAPS label (« Science avec et pour la société ») (SAPS), including, for example, a TV program on [Les inégalités sociales](#).

2-c) Other related funded projects (ANR, including France 2030, IUF, ERC, etc.)

The projects presented below are linked to DemoCIS in terms of their scientific contribution to the project's challenges. No DemoCIS funding will be granted to these projects. This commitment is made by the consortium members, who will guarantee that no action in these ongoing projects will be financed by DemoCIS funding.

Name of the project	Description	Type de project	Lien scientifique avec le projet
LAIC	Libertés associatives et initiatives citoyennes	ANR	Link with challenge 4
PSGS-HCH	Paris Seine Graduate School of Humanities création heritage	ANR	Link with challenge 4

7.4. Research power (to be filled in on the deposit site)

8. Indicators

1.a) Number of Teacher-researchers, research engineers and researchers with a project participation rate equal to or greater than 50% of their research time	Measurement reference date		
	<i>1st of October 2024</i>	<i>1st of October 2027</i>	<i>1st of October 2032</i>
	103	113	125
1.b) Number of ERCs obtained in the field by a researcher or teacher-researcher in the consortium	Measurement reference date		
	<i>2021 to 2024</i>	<i>2024 to 2027</i>	<i>2027 to 2031</i>
	0	1	2
1.c) International attractiveness <i>Measuring the volume of exchanges of researchers and teacher-researchers. Exchanges are counted in both directions (to and from an institution in the consortium).</i>	Measurement reference date		
	<i>1st of October 2024</i>	<i>1st of October 2027</i>	<i>1st of October 2032</i>
	5	18	25
Mobility lasting between one and six months	3	6	10
Mobility of six months or more			
1.d) Scientific production	Measurement reference date		
	<i>1st of October 2024</i>	<i>1st of October 2027</i>	<i>1st of October 2032</i>
	1956	2249	2587
2.a) Number of doctoral students in the field, including international ones	Measurement reference date		
	<i>1st of October 2024</i>	<i>1st of October 2027</i>	<i>1st of October 2032</i>
	228	245	270
2.b) Number of post-doctoral students, including internationals, in the field	Measurement reference date		
	<i>1st of October 2024</i>	<i>1st of October 2027</i>	<i>1st of October 2032</i>
	26	40	65
3.a) Tools for making available sources, data and knowledge created or developed as part of the project.	Measurement reference date		
	<i>October 2024</i>	<i>October 2027</i>	<i>October 2032</i>
	6	16	25
Tools dedicated to the valorization of qualitative and quantitative data	13	30	60
Tools dedicated to the dissemination of knowledge developed as part of the project			
3.b) Public policy support at local, national and international levels, within the framework of the project	Measurement reference date		
	<i>October 2024</i>	<i>October 2027</i>	<i>October 2032</i>
	25	60	120
3.c) Number of continuing education trainees trained on the theme in the leader of the consortium	Measurement reference date		
	<i>October 2024</i>	<i>October 2027</i>	<i>October 2032</i>
	35	110	200
